Unencumbered Balance	419		

PROJECT DESCRIPTION

This project supports replacement of breathing air compressor systems which have reached or are approaching the end of their service life. Breathing air compressor systems provide breathing air to self contained breathing apparatus worn by firefighters, which is a critical component of the personal protective equipment used by fire and rescue personnel.

ESTIMATED SCHEDULE

This project supports replacement of breathing air compressor equipment at four stations in FY25, two stations in FY26, three stations in FY27, and three stations in FY28.

PROJECT JUSTIFICATION

Many of the compressors slated for replacement have been or will be in service for 20 years or more and are approaching or have reached the end of their useful life. Replacement of such units is required to ensure consistent system performance and reliability for this equipment which supports the life safety of fire and rescue personnel. Factors such as use and location are also considered in evaluating which units require replacement rather than repair. Systems planned for replacement through this project represent the

oldest units in service.

COORDINATION

Montgomery County Fire and Rescue Service, Local Volunteer Fire Departments, Department of General Services
