Dear sirs:

I will be out of the country on the hearing date for the subject study, so am providing these written comments.

As an environmental scientist, I must say I find the environmental documentation to be quite thorough. The precious stretch of forest, wetlands, creeks, and meadows that this project would disrupt has been investigated and presented quite well. What we stand to lose if this road is ever constructed will be remembered by future generations by way of this document.

I see two major flaws in the documents:

1. The purpose and needs statement pre-determined that the road would be built, regardless of consequences to environment, health, cultural and historic resources, or long-term benefit to Montgomery County Residents.
2. In this massive document, mass transit is given two pages of token inclusion. It is not seriously explored as an alternative, as required by NEPA.

For the eight or so years this study has been underway, the public has been told repeatedly that the purpose was to "determine the need" for M-83. The study was proposed in the context of a unanimous recommendation from a transportation planning task force and the M-NCPPC to permanently remove the project from the master plans. It was decided instead to do this study to determine "if there was a compelling need for the road."

In the public notice for the upcoming hearing on the study, the purpose is stated as "to develop transportation improvements in Montgomery County east of I-270 between Clarksburg and Gaithersburg." This leaves no place for even considering whether or not the project should be eliminated from future planning. Furthermore, the purpose statements pretty clearly insure, a priori, that the master plan alternative will be the most "desirable" for achieving the stated "improvements" to traffic.

I would have hoped for a study that recognized the extensive community costs along this route as sufficient to reject all future consideration of building there. And equally important, the study should have looked seriously at mass transit and improvements to existing roads and intersections. For example, Philip Tarnoff in his book *The Road Ahead*, describes practices such as traffic light timing, entrance ramp metering, and other low-cost solutions to achieve dramatic improvements in traffic capacity of existing roads. The subject study does not appear to have made any serious attempt to include these options in its limited scope.

It is well understood that we are living in a world where CO2 emissions are far greater than will be sustainable for much longer. We must **reduce** atmospheric carbon, not keep generating more. Furthermore, it is well known and also obvious that new roads generate more trips, more traffic, more atmospheric emissions, and ultimately don't improve transportation, as the new roads fill with traffic. Mass transit solutions to our transportation needs must take first priority in major planning such as this. The two pages in the report on mass transit indicate a complete refusal to give that alternative the careful study it deserves. **The application for permits should be rejected on this basis alone.**

#### **IMPACTS ON COUNTY STREAM VALLEY PARKLAND**

Beyond the philosophical considerations above, the environmental impacts are the primary reason not to construct M-83. In spite of many assurances of "mitigation", some impacts from major construction such as this simply cannot be mitigated. The ribbon of greenbelt around Germantown's NE perimeter is already more slender than originally anticipated by the master planners. To bisect this narrow park with a four-lane, ultimately six-lane, highway will essentially **eliminate the park**. Disruption of wildlife habitats and corridors, introduction of air and water contaminants to the creek and special high-biodiversity area, elimination of mature forest canopy, noise and visual impacts; these things cannot be mitigated. Either we will preserve a precious stretch of healthy forest, creek, and wetland, and maintain a greenbelt park, or we will construct a major highway. Specifically, the claimed 0.87 acre wetland impact for a bridge over Dayspring Creek seems inaccurate and disingenuous. This figure ignores the additional construction impacts (i.e. equipment access roads and tree removal) which will increase that impact area.

Some years ago, the Church of the Saviour dedicated a permanent conservation easement along the Dayspring Creek, and its seeps and steep slopes. This preservation effort will be pointless if the County is allowed to compromise the northeast side of the creek with major construction. Even though the planned route is now as far up-slope as adjoining private properties will allow, the down-slope impacts will remain.

Over several decades, I have been involved in efforts to make sure the environment got equal time with the highway planning aspects of the study of this proposed highway. I believe that your documentation largely reflects all the impacts that should be considered. My plea is that substantial weight will be given to these impacts in your deliberations over whether to issue permits. I believe that the trivial attention given to the alternative of mass transit and existing road improvements is a violation of the NEPA process, and that you must disapprove any permits on that basis.

In summary, I believe that you must reject this application for wetlands and other permits. Montgomery County should not follow up with further study of the road option, but rather with the development of a 21<sup>st</sup> Century transportation plan featuring sensible, workable, mass transit, as well as delivering the walkable, bikeable neighborhoods which the Germantown Master Plan promises.

Sincerely,

Gale Quist

**Testimony opposing Alternative 4 Modified and supporting Alternative 9 (A)** August 7, 2013

Trees are important, but **not** more important than people. Noise will profoundly and negatively affect people along Alternative 4 Modified's route.

I am Mary Jane Goodrick, a homeowner in Goshen, MD.

My family and I oppose Alternative 4 Modified and support Alternative 9 (A).

In the Public Notice for this hearing it was stated by the agencies: "The decision whether to issue the permit will be based on an evaluation of the probable impacts, including cumulative impacts of the proposed activity on the public interest." Then it lists a number of important considerations, including "property ownership and in general the needs and welfare of the people."

The "needs and welfare of the people" is what I would like to talk about regarding noise and trees.

Alternative 4 Modified presents unacceptable noise levels for the **largest number of homes**, at least a total of 417 according to the Study. Many homes will require ugly sound barriers just to keep out some of the noise out.

But what does that level of noise mean practically? Living on the route of Alternative 4 Modified, where a 4 or lane highway will replace semi-rural 2 lane roads that were never planned for, nor developed, with that in mind will become a nightmare. People will not be able to carry on a conversation in their own backyards, that is, a conversation that can be heard. For many people, they will never be able to sit outside for meals with their families without the atmosphere being ruined. Noise will also affect those same

Trees are important. I like trees. Trees are a renewable resource, and they are renewed by the ability to plant more trees. The trees of M-83 should not be more important than the disastrous consequences to people who live within the area of Alternative 4 Modified, people who will travel in stop-and-go traffic from inside and outside the community along Alt 4, and people needing emergency vehicles to have speedy access to people in distress.

Trees are important, but **not** more important than people.

You can plant more trees, but you cannot make whole a household along the route of Alternative 4 Modified, if that Alternative is chosen. Noise will profoundly and negatively affect the daily lives of the people whose homes are very close to the potential highway.

There are many other factors that could be discussed opposing Alternative 4 Modified and supporting Alternative 9 (A), but I wanted to spend my three minutes on trees and noise pollution.

My family and I hope you will grant the permit for Alternative 9 (A).

Thank you very much.

v

Dear Mr Jack Dinne and Mr Sean McKewen,

I sat through the hearing at Seneca Valley High School on Wednesday, August 07, 2013 and wanted to provide final input and comment to the hearing

Clearly the one item the room could overwhelmingly agree on the night of the hearing was that Alternate 4 Modified is the least desired and it has the greatest impact. It funnels traffic through communities that were never built to handle such a level of traffic. The width of planned road does not reasonable fit between existing homes and will greatly impact the quality of life in those communities.

The problem with Alternate 1, 2, 5 is that it does not solve the future problem. Unless the county decides to stop the Clarksburg development these alternatives assume most of the traffic will join 355, which will not be able to handle the long term load even with the limited improvements suggested. Intersections like 355 and Montgomery Village Ave are already failing many times during the work week and weekend, requiring sometimes 3-4 light cycles to get through. Rescue vehicles coming from the fire station must travel up the wrong side of Montgomery Village as the traffic is in gridlock and cannot move out of the way. The projected volume of traffic to be added from already approved future development will overburden these roads.

The result of Alternate 1, 2, 5 is that traffic will actually find alternate 4. Given the location of main roads planned for Clarksburg traffic will come out to Route 27 near Brink Road and a large volume of the traffic, not going to go to I-270, will take roads along alternate 4 to get down county or to the ICC. So these alternates will indirectly greatly impact communities along Brink, Montgomery Village Ave, Goshen, Wightman and Snouffer School Road. Individuals from these communities pushing for alternatives 1, 2, 5 will actually get what they most don't want – Alternate 4 traffic without any improvements. Potentially worse impacts than Alternate 4.

That leaves Alternate 8 and 9. Alternate 8 actuals impacts 355 where it is currently failing already and makes absolutely no sense. This leaves you with Alternate 9 as the only remaining real option short of stopping all planned development in Clarksburg. Alternate 9 has been known for decades for anyone who has made a reasonable effort to find out about future road plans. It was on the sales plans for Montgomery Village and other new communities along its path and has been marked by signs for close to a decade.

That said, every effort should be made to minimize the impact to wetlands, parks and communities along the roads path during and after construction.

I thank you for your time,

J. Kyle Ackerman

August 20, 2013

Dear Sirs,

I am writing to reaffirm the Clarksburg Civic Association's support of M-83 and the Master Plan Alignment, Alternative 9. M-83 has been master planned for decades and is included in five local master plans. M-83, which connects present Midcounty Highway in Montgomery Village to Snowden Farm Parkway in Clarksburg, is a spine road around which Clarksburg was designed and built. The density in Clarksburg would never have been approved without planned road and transit infrastructure. Current roads are inadequate and many intersections are already failing. In other words, Clarksburg is predicated on transit AND new roads. Neither should now be in question. It is not an "either-or" proposition; we need both. Germantown has been re-master planned for 3,500,000 square feet commercial and over 9,000 additional residential units. This will put even more pressure on existing roads, thus making the need for M-83 even greater for surrounding communities, especially Clarksburg. M-83 will drastically reduce congestion and trip time for trips north and southbound, thus reducing gasoline emissions and the overall carbon footprint generated by the residents of Clarksburg when leaving their homes and community to travel to work, school, activities, and errands. Most of these trips are not possible to take via transit, and may never be possible via transit, due to multiple factors such as family schedules, limited transit service, lack of connectivity of roads, to mention a few things. It's unrealistic to expect that the residents of Clarksburg will suddenly be able to exit their cars and take only transit or be willing to sit in traffic any time they wish to go grocery shopping or to take children to school or activities.

Other proposed alignments, which are now under consideration, affect people who bought homes believing they could trust master plans. Some could lose parts of their property or even their home. Choosing another alternative will unfairly impact them, and lower their property values.

Alternative 9a is the best alignment for M-83.

- 1) Bridges are used to span some wetlands.
- 2) Trip times are greatly reduced.
- 3) Removes less than an acre of woods/wetlands

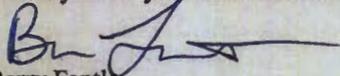

- 4) Provides an alternative to 355 and 270.
- 5) Right of way has been obtained

There is vocal opposition to this road, but, please keep in mind that opposing voices are usually louder than the voices of supporters. Also, it is very difficult to get vocal support for something that is decades away from being built, no matter how badly it will be needed in future. Many of those in the opposition have known about M-83 for decades. In Montgomery Village there are signs notifying residents that a road is going to be built. Residents along the master planned alignment signed documents at closing informing them of the proposed road. Even the outspoken Dayspring retreat not only knew the road was planned, they chose to purchase property that would be affected after watching a Germantown master plan process which incorporated the road, in the 1970s. Let me state that again: Dayspring actively chose to buy property that would be affected by the road AFTER the 1974 Germantown Master Plan incorporated M-83. Dayspring subsequently did not voice any opposition to M-83, even when Clarksburg was being master planned in 1994.

Clarksburg was planned with a direct transit route to Shady Grove, the CCT. Now this is to be a circuitous route around Science City and will not ever reach Clarksburg for decades, if at all. The state of Maryland is aware that CCT will be long-delayed in reaching Clarksburg, yet this has not been factored into the traffic patterns for the Midcounty Corridor Study.

M-83 must be built and Alternative 9 must be the alignment. Doing nothing, or choosing another alignment will be disastrous for Clarksburg. Clarksburg has become an island, isolated by lack of roads, lack of transit, and lack of services. Please do not perpetuate this status. The residents of Clarksburg deserve better, and relied upon the Master Plan alignment when selecting their homes, as did the residents of Goshen who would be adversely affected by Alternative 4. No matter the vocal nature of the opposition, the route was publicly available and disclosed, not only to residents of Clarksburg, but also surrounding communities such as Montgomery Village, and businesses, such as Dayspring Retreat.

Thank you for your consideration,

Barry Fantle  
President, Clarksburg Civic Association

August 21, 2013

Dear Mr. Jack Dinne,

I am writing in severe opposition to the Master Plan, Alt. 9. I am a resident of Windbrooke Dr, Gaithersburg, and this proposition would literally pass immediately next to my place of residence, destroying beautiful wetlands, homes of amazing animals that I hear and enjoy each and every day, and pose a threat to the safety and well-being of the elementary school children right next to this proposed road. When I purchased my condo, I was assured this was protected wetlands, and nothing of this sort would happen. It is a joy to live here, and this road would extinguish the lovely lush greenery that surrounds this complex and create more cement scenery, which is unfortunately what Montgomery County is becoming.

Development is rampant; it must be halted in favor of maintaining some of the beauty and charm, particularly of Montgomery Village. For the love of nature and in defense of more horrible development, please try any least restrictive alternatives in favor of this terrible plan. I would not even want to live here if this happened. The impact on many communities, wildlife and wetlands at this juncture would be nothing short of disaster on many levels! Please do not issue a permit to extend Midcounty Highway through my beautiful community. I thank you for your time and consideration. Please contact me regarding this ongoing process.

Sincerely,

Stephanie F. Mercer

**REF: Testimony on Midcounty Highway Alternative 4 – Transportation Safety**

---

My name is Neil Lerner. For the past 30 years, I have made my living as a consultant and researcher in the field of roadway safety. **I routinely conduct studies for the Federal Highway Administration, the National Highway Traffic Safety Administration, the National Cooperative Highway Research Program, various states and other branches of the USDOT.** Over these same 30 years, I have also been a resident of the Northgate community in Montgomery Village. So I come to you today as someone with expertise in roadway safety, who also has intimate personal knowledge of the roads and communities that would be affected by Alternative 4. I am here to explain to you some significant safety concerns that exist for Alt 4, and ask that you delete it as an option.

There are three main concerns: First, the excessive number of access points. The current road is a minor two-lane road accessed by many residential driveways and minor roads. It will be very difficult to access Wightman Rd from these access points if it is a higher speed highway, especially at peak periods. Since traffic entering the road here would only be able to turn right, there will be a need for numerous U-turns on this higher speed road as well. Local traffic will also be mixed with longer distance commuters, resulting in more conflict. So we can anticipate movement conflicts, speed conflicts, and gap acceptance issues.

The second concern is pedestrian safety. There are bus stops on both sides of the road, serving the Shady Grove Metro and other destinations. This results in many pedestrian crossings, often at mid-block. Elsewhere, on one side of Wightman Rd, is Kaufman Park, which generates a lot of cross-road pedestrian activity, including many dog walkers. On the opposite side of Wightman Rd is an access point to the Seneca Creek Trail, with a lot of hikers and families.

The third concern is the large number of intersections for this type of planned road. Alt 4 features about 35 intersections, several times that of the original plan. Intersections, even if well-designed, are natural traffic conflict points. They have crash rates far higher than tangent road sections.

So in summary, Alt 4 presents problems of traffic conflicts, pedestrian conflicts, and numerous intersections. The public safety concerns are significant. It should not be considered. Thank you.

*Testimony regarding Midcounty Highway Alternative 4, presented to the Army Corps of Engineers and Maryland Department of the Environment on August 7, 2013:*

Good Evening,

My name is Jane Hatch (32-year resident of Montgomery Village and 53-year resident of Montgomery County). I am president of the Northgate Homes Corporation, a community of 1149 homes in Montgomery Village. I am here to ask you to remove Alternative 4 from consideration

Portions of Northgate are directly adjacent to Wightman Road, and Alternative 4 would have a devastating impact on the livability of my community. We ask that the community impacts surrounding Alternative 4 raised here tonight be thoroughly considered, particularly in light of the fact that our 40-year-old neighborhoods were developed around existing roads and Alternative 4 has never been part of any Master Plan.

Alternative 4 would remove greenspace owned by Northgate and would literally run a highway to the fences of homes in our neighborhoods. A four and six lane highway would isolate us from our neighbors and amenities in North Village, such as Kauffman Park, walking paths and churches. Access to critical commuter bus lines would be negatively impacted, affecting the working poor who rely on them to get to their jobs.

The majority of Northgate residents affected by Alternative 4 is of modest means, and would not recover from the decline in property values the highway would cause. Alternative 4 is already having a negative impact on our property values, and it is very important that it be rejected as soon as possible.

Alternative 4 would change the character of our community, our quality of life, and our access to public transportation. It would have the worst noise impact of any alternative, the greatest number of residential property impacts, and the greatest potential for accidents because of the multitude of intersections.

Northgate residents have the perfectly reasonable expectation of continued quiet enjoyment of their homes. Along with our neighbors in East Village, North Village, Prathertown and Goshen, we have a longstanding claim to our quality of life and preservation of property values, based on decades of planning decisions made by the existing Master Plan.

The infringement on these rights should not be undertaken where the benefits for the public obtained by Alternative 4 are non-existent or minimal, and accomplished at a disproportionate expense and disruption to our community.

Thank you.

Jane Hatch, President  
Northgate Homes Corporation  
20448 Aspenwood Lane

## Montgomery County Group

August 8, 2013

Dear USACE and MDE,

The Montgomery County Sierra Club Group opposes the construction of M-83, the Midcounty Highway Extended. In a part of the county already dense with roads, we do not believe you should be building another six-lane highway through 50 acres of the last remaining local habitat for plants and wildlife. Instead, we support Alternative 2, which saves money, uses existing infrastructure, and supports development of rapid transport to Clarksburg.

The environmental impacts are reason enough to reject the Midcounty Highway Extended. While some "mitigation" is planned, such a project cannot be fully mitigated—the affected land will never be restored to its current state. In addition, streams and wetlands will be threatened by construction, the presence of low bridges will alter habitat, and stormwater runoff from impervious surfaces will have a continuing impact. The threat to water quality is very real. We urge you to take a holistic look at the impact of this and other projects, and to consider the Clean Water Act, which mandates that you protect aquatic resources.

In the project's 1000+ page document, mass transit is given just over a page, not seriously explored as an alternative, as required by NEPA. Yet several options would better serve Clarksburg and other communities: building rapid transit on MD 355, building the CCT, and introducing express buses on I270. These will better protect the environment and save local people the need to buy endless cars for every family member.

We believe that M83 is a dinosaur project made for an outdated concept of endless roads and sprawl and is not sustainable. We hope it will be rejected and removed from future planning.

Sincerely,

Ethan Goffman  
Transit Chair  
Montgomery County Sierra Club Group

August 6, 2013

To: Mr. Dinne, CENAB-OP-RMN, and Mr. McKewan, MD DOE

From: Leonard and Sheila Yoritomo, 10701 Seneca Spring Way, Montgomery Village, MD

Re: M-83, Written Testimony for August 7<sup>th</sup> Hearing on the Midcounty Corridor Study

Dear Mr. Dinne and Mr. McKewan,

We would like to register our profound distress with the recent study conducted by the Department of Transportation (DOT) regarding alternatives to building M-83. As homeowners in Montgomery Village for 23 years, we are acutely aware of the enormous effect M-83 and many options under consideration will have on the quality of life for our family and community. A new road would destroy and disrupt our beautiful neighborhood forever. Our family, neighbors, and friends regularly enjoy time in this beautiful parkland, playing, walking dogs, jogging, hiking, and just enjoying the peaceful wooded setting. We, along with perhaps thousands of other residents, enjoy the abundance of wildlife that live in the park and the beauty of Seneca Creek.

We do not need another road; we need more creative forms of public transportation. While we fully appreciate the need for relief of traffic congestion in this area, we do not believe that such decisions should be made with less than complete and impartial data and analysis. Certainly, the potential severe environmental and community impacts of M-83 and its alternatives merit a full, fair and thorough examination of all build/no build options. Yet, it is painfully apparent that DOT did not do its job. Instead of making a realistic assessment of Alternative 4, DOT, for unexplained reasons, considered a 6-lane option that exceeds the current 80-foot right of way. Have you been to the end of our street? There is no room for a six lane road. Are you planning on demolishing existing homes? In addition, the impact of Alternative 4 was not assessed in concert with the improvement of 355, thus presenting a distorted picture of this key no-build

option. It would be a travesty for the County Council to make a decision based on such a flawed analysis.

As homeowners, active community members, and parents living in the Stedwick neighborhood of Montgomery Village, whose family and neighborhood would be directly impacted by the M-83 decision, we are extremely concerned about the lack of fairness and professionalism evident in the DOT analysis. Whether M-83 or its alternatives are built will have a tremendous impact on our community and property values. Providing the County Council the information it needs to make a fair and balanced decision is essential. Therefore, we strongly urge the rejection of the current study.

Sincerely,

Leonard and Sheila Yoritomo

Re: M-83, Written Testimony for August 7<sup>th</sup> Hearing on the Midcounty Corridor Study

Dear Mr. Dinne and Mr. McKewan,

We are writing to express our opposition to M-83, and especially our concern with the clear biases in the alternatives thus far studied by the Department of Transportation(DOT). In our view, the funding contemplated for building M-83 would be far better used for improved and increased public transportation. And to the extent that improvements to the area's road network need to be part of the solution, it should go without saying that the studies considering alternative options for making such improvements need to fairly and comprehensively compare those alternatives. Unfortunately, that has not been the case with the current approach.

The existing DOT study failed to look at true alternatives to constructing M-83 in a way that fully took into account likely synergies from improvements that could be made to a number of different existing roads, including 355 and other alternatives. More bizarrely, it assumes that up to a 6-lane highway would be built under Alternative 4. In fact, it seems far more likely that a narrower right of way would be used, dramatically reducing the number of homes that would be affected by this Alternative. At a minimum, until a more sensible variant of the Alternative 4 is completed, the County Council is in no position to make a choice among various options with such a flawed study.

We appreciate the difficulties facing commuters in this area. However, there is also a need to consider solutions that pass a test of basic fairness, and professionalism. This study does not meet these criteria. Dr. Beth Kosiak has worked for decades as a policy analyst for the federal government and non-profits, and fully appreciates the importance of accurate and impartial analysis of often controversial issues that affect a wide range of constituents. And as homeowners and community volunteers who have lived in Montgomery Village and the Gaithersburg area for over 25 years, we have been concerned about M-83 for the entire time of our residence and have been actively engaged in the many public meetings over the years. Indeed, many times we were told explicitly by both Maryland and Montgomery County officials \*\*that M-83 and its alternatives would never be built and based our decision to buy a house first in the Woodland Hills neighborhood of Gaithersburg (1990-2000) and then in the Stedwick neighborhood of Montgomery Village (2000-present) on that information.

Building M-83 and the proposed alternatives threatens to do great community and environmental harm to our economically, racially and ethnically diverse, long-established, planned neighborhood. It is thus not a decision to be made lightly or on the basis of fundamentally flawed analysis. We hope and expect

that the County Council will have the wisdom to understand this, and will draw the appropriate conclusion: to reject this study.

\*\*In 1992, then-Governor Parris Glendonning announced that M-83 and its alternatives would never be built due primarily to the unacceptable destruction of wetlands, among other considerations.

Sincerely,

Steven and Beth Kosiak

To: Mr. Dinne, CENAB-OP-RMN, and Mr. McKewan, MD DOE

From: Barbara Deyhle, 10712 Seneca Spring Way, Montgomery Village, MD 20886

Re: Written Testimony re: August 7<sup>th</sup> Hearing on Midcounty Corridor Study

Dear Mr. Dinne and Mr. McKewan,

As a Montgomery Village homeowner in the Ridges of Stedwick neighborhood for over 13 years, I am writing to express both my strong opposition to M-83 and its currently proposed alternatives, as well as my serious concern with the Midcounty Corridor Study conducted by the Department of Transportation (DOT). While I certainly appreciate the need to relieve traffic congestion in the area, it is critical that the study designed to inform the County Council's decision M-83 be based on an accurate and impartial portrayal of the various options. Unfortunately, the recent study did not accomplish this essential objective.

Rather, DOT committed two very grave mistakes when it conducted its study. First, it did not examine improvements to Route 355 in concert with Alternative 4. Second, it proposed that consideration be given to a 6-lane option for Alternative 4 that exceeds the current right of way. Thus, the DOT did not actually study what a no-build alternative to M-83 would like.

I have been actively involved in past public meetings about M-83 and proposed alternatives. Our historic planned community may well be divided by a 6-lane highway that will severely impact the environment, including destruction of wetlands, school playgrounds, community parks and property values. As a homeowner who is significantly impacted by the options under consideration, I am troubled that a study of such importance would not be conducted in a fair and balanced manner. Certainly, the County Council does not now have the information it needs to make such a far-reaching decision. I urge you to reject this unbalanced and unfair study.

Very truly yours,

Barbara Deyhle

10712 Seneca Spring Way

Montgomery Village, MD

## Testimony re: M83

Good Evening. My name is Beth Daly and I live in Dickerson. For the past 14 years I have been commuting to work and running errands along Route 355 from Comus Road south thru Clarksburg to Germantown and have seen first-hand the impact development without infrastructure improvements has had on our local roads. And I am concerned about the increasing traffic congestion.

But I do not think that M83—the Midcounty Highway Extended—is the solution. I am here this evening to urge you to reject the permit application for M83 and support Alternative 2—which improves traffic flow by improving our existing infrastructure, particularly at intersection choke points. And most importantly, use the dollars to invest in public transit.

Yes, the Upcounty needs traffic relief. It is the fastest growing region in the County yet many of its residents are not served by a nearby Metro station or any comprehensive transit system. But building a road is not a long term solution. We need a plan with vision. The estimated \$700M county dollars should instead be utilized to construct transit options to get Upcounty residents (and thru commuters from growing Frederick County and beyond) off the roads and to their work centers, social destinations and back home. For that reason, I support the 355 North corridor of the Rapid Transit extended to Clarksburg as well as a third track on the Brunswick MARC line-- which serves the points north of our county's Ag Reserve and then travels south to high density areas throughout Montgomery County and beyond. If we do not have the dollars to extend the Metro's Red Line, then we must provide effective, convenient ways for residents to get to Shady Grove.

In fact the development in Clarksburg was predicated on public transit, on page 22 of the Clarksburg Master Plan it states: "Transit is an essential feature of this plan; without it, the Plan's vision cannot be realized." How can the county in good conscience go forward with existing development and expect to attract

good jobs to the Upcounty without this essential feature? In fact, in the case of M83, transit has not been considered at all.

As a resident of the Ag Reserve, I am also concerned about the environmental impact of the proposed M83—particularly its long term effect on the aquifer. Montgomery County residents in the Ag Reserve and elsewhere get their drinking water from underground wells. Clarksburg—which borders the Ag Reserve-- is expected to grow to 40,000 residents and serve as a work center for others. That is a lot of pavement. Pavement forces rainwater to become overland runoff, depriving the aquifer of recharge volume. The on-going Clarksburg development coupled with construction of M83 would increase imperviousness and ultimately affect the quality and quantity of underground water sources and degrade the water quality for the entire region. USACE and MDE should carefully consider and study the cumulative impact of M83 construction in conjunction with the already approved development.

And, finally, there is no study that can explain the pain of having your home or neighborhood bulldozed. This is especially unfair to residents who consulted the Master Plan and bought homes with the understanding that M83 was not in the path of their neighborhoods.

It is 2013. Montgomery County has the opportunity to employ new, innovative transit options to move Upcounty residents to their destinations and attract businesses to the area. Just building a road to solve congestion is –as my kids would say –“so 1980’s”. Let’s show some vision.

Many thanks for your time and work on behalf of Montgomery County citizens.

19071 / 48-14

**Subject:** M-83 Public Hearing  
**Attachments:** 7-10 003.jpg

Mr Leggett -

I would like to bring to light some recent developments within your Department of Transportation relative to the M-83 Public Hearing scheduled for August 7.

I live within 100 yards of a section of the proposed option 8 & 9 route and have walked the entire 5.7 mile route over 5 times and I can tell you, with my hand on the Bible, there is no way in the world this highway can be built thru this terrain (pre-historic fauna, granite bolders, 100 ft tall Sycamores, mounds and mounds of ferns all sloping down to the Seneca Creek waterway system). If, by some act of God, they are able to engineer it to work, it will cost 5 times the \$360M price tag they claim it will cost. Classic case of low balling in order to gain approval. The result will be nothing short of an environmental holocaust.

I have talked with hundreds of residents in numerous communities along the route, held signs along major sections, handed out flyers to condo & townhome clusters, talked to sports programs which use fields along the route, and the reaction from them is the same, shock and awe. Most response are phrases like; "why", "no way", "that's crazy", "what for".

The biggest tragedy of all, is the lack of transparency on the part of DOT in getting this Public Hearing notice out to the public. 99 out of 100 people I met had no idea this meeting was in the works, nor had they a clue the location of the proposed option 8 & 9 route. This is unfair, undemocratic and prejudicial. And, let's say they do go to the DOT website to get further information on the proposed routes, one would need to be a webmaster to be able to navigate thru to get to the maps and, more importantly, to link them together.

God holds us all accountable for our actions, and to allow this highway to be built, well let's put it this way, I wouldn't want it on my conscience.

Thank you.

Bob Portanova  
 Montgomery Village Resident

**Subject:** RE: M-83 Public Hearing

Dear Mr. Portanova:

more) and the footprint left will last for centuries. The lives of all animals will be permanently ended. The micro-climate will be permanently altered. Where there were ponds and reeds and ferns and pools, there will be crusher run gravel, pavement, steel, cement walls and barriers which will block out the sun. This procedure, of creating temporary roads thru-out the route, will continue to the end of the route. I see construction projects in many areas of the county and although the finished product is permanently devastating to the environment, the construction does the destruction.

TREE RE-PLANTING PROGRAM - Did you know that DOT claims they will be re-planting trees to replace those removed? Yep, in Damascus, at one isolated location. Not along the route where the trees were removed, no, but to satisfy MDE requirements, they can claim they replanted. This is criminal. So for example, if 10,000 trees are removed, all of the re-planting will happen near the end of the route in Damascus. They can check it off as done !!

I can go on and on, but these are questions you all need to be asking DOT along with us. We know you're behind us and we are preparing to do battle with you.

Let me know if I can help in advance of the meeting.

Mid County Highway Corridor Study

The Amended Germantown Master Plan of 1974 designated an alignment for M83 which carefully avoided the historic structures and African-American Town of Prathertown.

In 1974 it had been decided that M83 was a necessary element (together with transit) for the future expansion of Germantown and beyond and was to be funded through the five year CIP at that time.

Residents should not have to be continually fighting decisions already made and written into master plans which they are supposed to rely upon when they buy their houses.

It is now time to stop any further study and grant the permit to build the road. The Germantown Historical Society supports the 1974 Amended Master Plan and its present closest alignment, 9A.

Sincerely,

*Susan Soderberg*

### Midcounty Highway Corridor Study

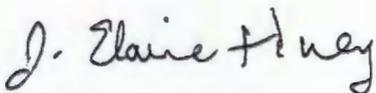

I have been a resident of Germantown since 1974, have seen many changes and have been very involved in civic life.

Ever since I have lived here, M83 has been on all local master plans and the regional master plan. The original plan took into account historic places and buildings, and the designated right of way was placed in the most efficacious location.

I ask you to follow the Master Plan Alignment Alt 9a and issue a permit for this alignment. The road was planned, together with transit options, for the planned expansion of Germantown and Clarksburg. Germantown has since had a further expansion of many millions of square feet of commercial development and many thousands residential units. This puts further pressure on the existing roads and makes M83 even more necessary.

We do not need any more money to be wasted on studies. We need M83.

Sincerely,

J. Elaine Huey

**Subject:** RE: M-83 Alt 4 letter against this highway in Montgomery Village area.

Dear Ms. Lease

Thank you for your e-mail and sharing the community's concerns on the Midcounty Corridor Study's (MCS) Alternative 4 Modified. Your opposition to Alternative 4 Modified is noted and will be included in the Environmental Effects Report (EER), which is the culmination of the detailed analysis for the project.

Montgomery County Department of Transportation (MCDOT) understands the distress that Alternative 4 Modified is creating for you and the residents in the North Village subdivision. We are mindful that this is a community in which you have lived, raised your families and hope to preserve. We assure you that we are very sensitive to community impact caused by Alternative 4 Modified and all the other alternatives, and we are certain this factor will carry substantial weight in the final recommendation for a preferred alternative.

As we perform the detailed analysis and make further engineering refinements, many factors will be evaluated including social, economic, and environmental impacts. The EER will document impacts to adjacent properties, community, safety, air quality, noise, property values, and quality of life issues as well as impacts to natural resources.

Thank you again for taking the time to share your thoughts. I encourage you and other members of your community to remain vocal and share any strategies that would serve to improve capacity east of I-270 from Clarksburg through Gaithersburg. Please feel free to contact me should you have additional concerns.

Best regards,

Subject: M-83 Alt 4 letter against this highway in Montgomery Village area.

Greg Hwang,

I am the President of North Village Home Corp. we have 888 homes in North Village that would be affected by M-83.  
You need to scrap Alternative 4 Modified M-83 because of the impact this highway brings to North Village and all our residents that would cut all of us in North Village from the rest of Montgomery Village. The North Gate School would be impacted as all of our children and adults that walk across Wightman Road to go to all the stores and pools and work in the area. We will not be able to drive safely in and out of our community.

Our natural resources will be impacted.

This road will not improve travel time up county.

This road will have the highest number of traffic conflict points.

This road will have the highest number of residential properties impacted.

This road will have the highest number of historic properties impacted.

This road is not consistent with the Master Plan.

Are you willing to put water and pipes in an area of wells in the Goshen area what a cost this would be to Montgomery County and this road project.

As I send earlier you need to pull this M-83 Mod Alternative and save Montgomery county money they don't have to spend.

Thank you,

Claudette Lease

Subject: M-83

Those of us who reside in the Montgomery Village area are sick and tired of the idea of M-83 coming anywhere near our Communities. We are fed up with the constant encroachment into our Village. M-83 and the alternatives would destroy environmentally sensitive woodlands, meadows and lowlands as well as a devastation of the quality of life we have here in the Village.

My back-yard backs up to Pepco property of fields, woodland & streams - home to fox, deer rabbit, turtles, hawks, possum and raccoon. The idea that anyone could even think about running a highway thru this area is insane.

The Village is a planned community that was thought out to establish a balance between greenspace and homes. This balance established crucial greenspace buffers which allow for residents to take walks thru, jog, let their dogs play, throw frisbees, play with kids etc..... This balance is critical for maintaining a quality of life here in the Village - we are not an urban center to create more and more bus stops, roads, cheap stores, gas stations, fast food establishments etc..... This is how a suburban village ends up becoming an urban wasteland and forces people to leave.

Your plans have devastated environmentally sensitive areas throughout the area including any piece of greenspace (even if only postage stamp size) as just several are noted below:

The ICC - I rarely see more than 1-2 cars using it - Devasted environmentally sensitive woodlands

Watkins Mill road extended - Devasted wildlife habitat - was home to deer, fox, rabbit, hawks etc..... now it looks like an airport runway

Watkins Mill Center - Planning underway to destroy more woodland and meadows next to Watkins Mill road extended

Washington Grove & Mid-County - 2-3 acre meadow - gone - leveled - construction underway

Needwood Road (just below Redland Rd - Derwood) 3 - 5 acre meadow - home to fox, deer, rabbit, birds etc... Leveled, destroyed - now home to a Korean Church and a huge parking lot

We have to retain these greenspace buffers - it is critical to helping wildlife hold on to what tiny bit of habitat they have left - the greenspace buffers also cut down on noise pollution, control run-off, absorb pollution, enhance the quality of life etc...

PLEASE listen and take a stand - leave a positive footprint - make a difference.

Thank you.

Key Participants,

Thank you for taking the time to read my brief email on the Midcounty Corridor Studies. I am a big supporter of improvements to our local transportation systems. The travel time during rush hour and even during off peak travel times is currently far to long between my home in Montgomery Village and destinations in Rockville, Frederick, and I-270.

I have read thru the various reports on your website and feel that Alternative 4 Modified is the best choice for our roads. I do not think that Alternative 1, No Build, is a serious option as change is most certainly needed to our local transportation systems. Please remember that although the other options that leave Montgomery Village out of improvements may appear, based on the vocal outcry of my neighbors attending the recent public meetings, to be more appealing to Alternative 4 Modified I think that the long term benefits provided by this option should not be over looked because of those among my neighbors who fear change. I think that any thing but an improved (with sidewalks) and divided 4 lane road is short sighted for the long term traffic patterns and development of the region.

I have not attended the recent public meetings, nor have many others I have spoke with that are in favor of the improvements provided in Alternative 4, because of the openly hostile nature of those in the opposition at these meetings but: I wanted all of you to know that I believe that I speak for the silent majority the are supportive of improvements to our local transportation systems.

Thank you for your time and energy,

George Pullen

**Sent:** Wednesday, November 16, 2011 3:54 PM  
**To:** Elinsky, Steve NAB  
**Subject:** Objection Alternative 4-Modified, (alternative route for Mid-county Highway Ext)

Dear Mr. Elinsky,

We are writing in opposition to Alternative 4-Modified, as an alternative route for the Mid-county Highway's extension.

- it is not consistent with the Master Plan
- the least improvement in travel time
- highest number of traffic conflict points
- highest number of residential properties severely impacted, i.e. property loss, wells, septic systems
- devaluation of our property (who will make up the difference for our loss?)
- additional noise projected into the neighborhoods, over and above the sound barriers

We would like for you to use another more efficient and less disruptive plan for the extension of the Mid-county Highway.

Walter and Eileen Seglem

**Subject:** Alternative 4 Modified

Dear Mr. Hwang:

I am writing to voice opposition to adopting Alternative 4 Modified of the Midcounty Corridor Study involving Wightman Road.

I live in the North Village community of Salem's Grant in Montgomery Village. I believe that routing M83 down Wightman Road is not a viable substitute to what was proposed in the original Master Plan due to many reasons.

The original Master Plan did not split Montgomery Village communities from the rest of the Village as our community north of Wightman Road will be. This separation will be most inconvenient, will be reflected in our property values, and will be unsafe for our children. There will be more traffic and noise, and exiting the community will become a nightmare. The limited green space that surrounds North Village will be eliminated totally along Wightman Road, and many homes will be threatened.

We have environmental issues too, a beautiful floodplain surrounding Seneca Creek, which has so much wildlife in its wetlands. To route M-83 through the floodplain at the Brink Road/Wightman Road confluence just below our community will cause much of this treasure to be disrupted and eventually vanish. During every moment of the day, and more than in any other place in the larger community, there are numerous cars parked there with hikers and dog walkers enjoying the pristine environment along the creek. What a shame to spoil all this for so many who use this trail along the creek area every day. You should observe the activity there and know that this is a place unlike any other for the community residents to get away and enjoy nature.

In some ways, we feel that this alternative was somewhat politically motivated and was originally proposed to spare another part of Montgomery Village.

We urge you in all fairness to please stick to the Master Plan. The best route for this road is the direct route that was planned originally, and not to have it snaking down to Wightman Road. Please don't send more traffic severely impacting our North Village community.

Thank you,

Janet Juras

**Subject:** Alt.4 modified

Dear Mr. Hwang,

I am writing to voice my strongest opposition to adopting alternative 4 modified of the Midcounty Corridor Study.(Wightman Road)

As a resident of Montgomery Village, specifically the North Village, this alternative severely impacts our community negatively. We do not want to separate the North Village from the rest of Montgomery Village. We choose to be a cohesive community.

I have been a real estate agent for 27 years. As real estate professionals, we encourage our clients to review the master plan before they make any decision in purchasing a home. (It is in fact a part of the real estate contract). Alt. 4 modified has never been on the master plan as Midcounty Highway. Why have a master plan at all if it means nothing in the future? People bought houses and did their due diligence, checking out the master plan, made decisions about their lives, and decided to go ahead with the most expensive investment that they will ever make based on the Master Plan. How can you just decide to put a Highway on this road? This decision will severely impact their property and lives.

The individuals that bought homes and reviewed the original plan for Midcounty Highway knew what they were buying regarding this road. The original plan for Midcounty Highway (on the master plan) makes the most sense.

If that plan will not be approved because of environmental impact, I believe you should choose to widen and improve MD 355. Alt. 4 modified does the least to improve traffic time and impacts more homes than any other plan.

I urge you to remove Alt 4 from further consideration.

Thank you.

**Subject:** RE: Wightman Road

Dear Mr. and Mrs. Nowell:

Thank you for your e-mail and the concerns that you raised on the Midcounty Corridor Study's (MCS) Alternative 4-Modified alignment.

The Department is apologetic for the distress that Alternative 4 Modified is causing the both of you and the residents along Brink-Wightman Roads. We are mindful that this is a community in which you have lived, raised your families and hope to preserve.

As we perform the detailed analysis, further refinements will be made on Alternative 4 Modified to minimize social, economic, environmental and human impacts. The Environmental Effects Report (EER) which is the culmination of the detailed analysis will document impacts that the proposed improvement will have on the adjacent properties, natural resources, safety, air quality, noise, property values, and quality of life issues. The EER document will be submitted to the federal and state environmental regulatory agencies for review and comments. The results of the detailed study will also be made available to the public and stakeholders for review and feedback. Afterward, the U.S. Corps of Engineers will hold a public hearing to provide opportunity for public testimony. Let us assure you that we are very sensitive to the community impact caused by Alternative 4 Modified and all the other alternatives, and we are certain this factor will carry substantial weight in the final recommendation for a preferred alternative.

Thank you again for taking the time to share your concerns. Please feel free to contact me anytime should you have additional questions or comments.

Best regards,

Gwo-Ruey (Greg) Hwang, P.E.

Dear Sir or Madam

If you lived anywhere near the proposed widening of Wightman Road, you would instantly understand the negative impact it would have upon the property values, noise and serious side effects.

There is enough air and noise pollution as it is.

We implore you to put this development in a location where less harm will be done. Just stand on the side of the road and envision what it would do to our homes and neighborhood.

We thank you for understanding our plea.

**Subject:** ARDS in the Midcounty Corridor Study

Dear Mr. Hwang,

I am writing to voice my opposition to adopting alternative 4 modified of the Midcounty Corridor Study in the process that will ultimately decide what course of action will be taken in the future development of roadways in the affected area.

Given the following criteria, Alt. 4 modified, makes absolutely little sense in pursuing.

- Moderate natural resource impacts
- Least improvement in travel time
- Highest number traffic conflict points
- Highest number residential properties impacted -Moderate number commercial/industrial properties impacted -Highest number historic properties impacted -Not consistent with Master Plan.

Of the above the one that is most disturbing is that Alt 4 modified is inconsistent with the Master Plan. In existence since the 1960's, the Master Plan has been available to the public for consideration in decisions regarding residential/commercial development, school locations, as well as for decisions on home purchases. Alternatives 8 and 9 are consistent with the Master Plan and should be the ones recommended for further consideration. Any environmental impact of Alt 8 or 9 can be minimized with modern road building technologies

Thank you,

Victor R. Siegel, DDS

**Subject:** Midcounty Corridor Study Alternative

I'm writing to tell you how strongly opposed I am to the proposed Alternative 4 - Modified (Alt 4 Mod) to M83 which proposes to widen Brink, Goshen, Wightman and Snouffer School roads.

I have lived in the Overlea development of Montgomery Village for 30 years. The proposed alternative would not only take our homes and property, but would lower our property values and substantially increase traffic and noise. I also believe this alternative would bring crime to the area and would make it almost impossible to safely and easily exit our development.

I am also concerned that construction of that magnitude in this area may cause damage to the Colonial Pipeline that runs through our development.

I urge you to find a different route.

PO Box 1715  
Baltimore, MD 21203-1715

From: Dana Feyns  
20402 Studio Pl  
Montgomery Village, MD 20886

Date: 10/27/2011

This is to express my concern regarding MIDCOUNTY CORRIDOR ALTERNATIVE 4 MODIFIED (Goshen, Brink etc.):

- It presents the least improvement in travel time
- The highest number of conflict points
- Highest impact on residential properties
- The highest number of historic properties affected
- Is not consistent with the master plan
- Will considerably reduce home values in our area and substantially increase traffic and noise diminishing the quality of life in our area

Please take into consideration the above when selecting an alternative.

Thank you

*Dana Feyns*

**Subject:** Yes to Alternative 4

Mr. Greg Hwang  
Mr. Steve Elinsky  
Mrs. Barbara Rudnick  
Mr. Jeffrey Thompson  
Mr. Isiah Leggett  
Mrs. Valerie Ervin

Key Participants,

Thank you for taking the time to read my brief email on the Midcounty Corridor Studies. I am a big supporter of improvements to our local transportation systems. The travel time during rush hour and even during off peak travel times is currently far to long between my home in Montgomery Village and destinations in Rockville, Frederick, and I-270.

I have read thru the various reports on your website and feel that Alternative 4 Modified is the best choice for our roads. I do not think that Alternative 1, No Build, is a serious option as change is most certainly needed to our local transportation systems. Please remember that although the other options that leave Montgomery Village out of improvements may appear, based on the vocal outcry of my neighbors attending the recent public meetings, to be more appealing to Alternative 4 Modified I think that the long term benefits provided by this option should not be over looked because of those among my neighbors who fear change. I think that any thing but an improved (with sidewalks) and divided 4 lane road is short sighted for the long term traffic patterns and development of the region.

I have not attended the recent public meetings, nor have many others I have spoke with that are in favor of the improvements provided in Alternative 4, because of the openly hostile nature of those in the opposition at these meetings but I wanted all of you to know that I believe that I speak for the silent majority the are supportive of improvements to our local transportation systems.

Thank you for your time and energy,

George Pullen  
Resident of Montgomery Village

**Subject:** M-83

Those of us who reside in the Montgomery Village area are sick and tired of the idea of M-83 coming anywhere near our Communities. We are fed up with the constant encroachment into our Village. M-83 and the alternatives would destroy environmentally sensitive woodlands, meadows and lowlands as well as a devastation of the quality of life we have here in the Village.

My back-yard backs up to Pepco property of fields, woodland & streams - home to fox, deer rabbit, turtles, hawks, possum and raccoon. The idea that anyone could even think about running a highway thru this area is insane.

The Village is a planned community that was thought out to establish a balance between greenspace and homes. This balance established crucial greenspace buffers which allow for residents to take walks thru, jog, let their dogs play, throw frisbees, play with kids etc..... This balance is critical for maintaining a quality of life here in the Village - we are not an urban center to create more and more bus stops, roads, cheap stores, gas stations, fast food establishments etc..... This is how a suburban village ends up becoming an urban wasteland and forces people to leave.

Your plans have devastated environmentally sensitive areas throughout the area including any piece of greenspace (even if only postage stamp size) as just several are noted below:

The ICC - I rarely see more than 1-2 cars using it - Devasted environmentally sensitive woodlands

Watkins Mill road extended - Devasted wildlife habitat - was home to deer, fox, rabbit, hawks etc..... now it looks like an airport runway

Watkins Mill Center - Planning underway to destroy more woodland and meadows next to Watkins Mill road extended

Washington Grove & Mid-County - 2-3 acre meadow - gone - leveled - construction underway

Needwood Road (just below Redland Rd - Derwood) 3 - 5 acre meadow - home to fox, deer, rabbit, birds etc... Leveled, destroyed - now home to a Korean Church and a huge parking lot

We have to retain these greenspace buffers - it is critical to helping wildlife hold on to what tiny bit of habitat they have left - the greenspace buffers also cut down on noise pollution, control run-off, absorb pollution, enhance the quality of life etc...

PLEASE listen and take a stand - leave a positive footprint - make a difference.

Thank you.

Robert Portanova

Montgomery Village

**Subject:** RE: Midcounty corridor study

Dear Barbara,

Thank you for your response to Paul's email.

At the public meeting on September 27, 2001 over 200 people were in attendance. The Montgomery County Department of Transportation (MCDOT) briefed the community on the various alternatives being studied for Midcounty Corridor Study (MCS) and explained that the federal process requires a rigorous evaluation of reasonable alternatives for accomplishing the project purpose.

Montgomery County defers to the recommendations of the various planning documents when evaluating roadway alignments. Area master plans play an important role in determining how the County will accommodate existing as well as future growth and provide a policy framework to guide the development of projects and programs, advance the County's goals and objectives. The citizens play an integral role in the master plan process and as such, it has been difficult for citizens to understand how the federal process supersedes decisions that were made during the local master planning process.

We appreciate your suggestions for narrowing the typical cross section. Alternative 4 Modified is being evaluated as a substitute for the Master Plan alignment of Midcounty Highway which is classified as Controlled Major Highway and, as such, must be able to accommodate a high volume of regional traffic, including truck traffic. At present the Brink-Whightman-Snouffer School-Muncaster Mill Roads corridor is fronted by residential homes which have direct access to the roadway via individual driveways. It is essential, for safety purposes, that the cross section include a raised median to separate opposing traffic and limit the number of locations where left turns can be made. The width of the median complies with Montgomery County Context Sensitive Design Standards and AASHTO guidelines. The 17-foot median width is the minimum width that will accommodate an 11-foot left turn bay at intersections and a 6 foot median to channelize traffic and provide refuge for pedestrians, bicyclists, and wheelchairs crossing the street.

The safe and efficient accommodation of pedestrians/bicyclists along the traveled way is equally important as the provisions for vehicles. The Department of Transportation believes sidewalks and bike facilities enrich the livability of a community and serve as critical links in the transportation network by providing pedestrian access to neighborhoods, transit, commercial districts, schools, and recreation areas. As such, we believe the sidewalks and

bicycle facilities are a part of complete street. The 10-foot width for the shared-use path adheres to the minimum width as dictated by AASHTO.

Each of the elements of our proposed cross section were carefully considered, recognizing that further narrowing would compromise the ability of Alternative 4 Modified to provide an effective transportation alternative to Master Plan Alternative 9. Alternative 4 Modified already has significant safety challenges to overcome in managing traffic at 33 unsignalized intersections and 86 driveways along the route, while Alternatives 8 and 9 have no driveways and only a few unsignalized intersections.

We hope that you can appreciate the challenges we face as we endeavor to balance the need to satisfy multi-modal transportation and safety objectives with the desire to minimize environmental and community impacts.

Thank you for clarifying that the EPA has driven the corridor on numerous occasions. We will relay that information to the concerned citizen.

Best regards,

Gwo-Ruey (Greg) Hwang, P.E.

Subject: Re: Midcounty corridor study

Paul,

Thanks for keeping us informed on the response to the public meeting. I guess I don't have to tell you how painful and hurtful it is to read some of the comments that were included. If you are preparing a reply back to the public, I do not have specific dates off the top of my head. I have been involved with transportation issues in Montgomery County for over ten years; and there were predecessors to me. I am not certain of the date when we "started over" with the Mid-county, but you were at the meeting at the county office, 2003. We were all involved with Watkins Mill Run extended study, the I-270 EIS and supplemental EA, the Corridor Cities Transit studies, New Cut Rd (is that the name?, you and Steve would know, I followed Steve and Bill around) and of course ICC alignment and mitigation which included Seneca Creek. We have driven Goshen, Snouffer School, Wightman, Brink, 355, scores of times either for this study, Watkins Mill, going up to see the development at Clarksburg, or onto Frederick. We have walked the resource in the study area a dozen times or more, with county and state representatives, consultants and with some of the folks in the community (from the Dayspring Retreat) and a couple times EPA with the COE.

How is it that the beauty of NEPA, the evaluation of alternatives, assessment of historic, community and natural resources, that the nation's goal in 1969 of "harmony between man and his environment; ... eliminate damage to the environment and biosphere and stimulate the health and welfare of man", so often turns to venom?

As their master plan anticipates widening, I am unclear of the surprise of evaluating widening. Looking at the proposed 105', I would suggest that a 24' and 19' bike/walk on both sides of the road could be scaled back without loss of function; possibly a couple feet off of a 17'

median too (don't know if the master plan/road code gives local guidelines). I am not positive, but I think the roads were 80' in the master plan, I would aim for that.

Thanks Paul,

Barbara

^^

Johnston, Rick Adams

Folks, we had a meeting on Tuesday night, Sept 27, where we briefed the Greater Goshen Civic Association and Montgomery Village Foundation on Alt 4 Modified. We will make a future presentation to the agencies, and/or invite you to subsequent public meetings. For now, you may view the meeting handouts and presentation materials on the project website at [www.montgomerycountymd.gov/midcountycorridorstudy](http://www.montgomerycountymd.gov/midcountycorridorstudy) . We presented our first cut of the design of the alternative, and displayed mapping which showed limits of disturbance. We did not indicate on the mapping where there would be displacements, because we are still refining the LOD by making changes to the profile, shifting the widening to the opposite side of the road where feasible, adjusting driveway grades, and incorporating retaining walls. However, there will be displacements.

We are currently investigating the presence of wells and septic systems along Brink and Wightman Roads. By state law, the right-of-way can come no closer than 10 feet to a well head. There is also a setback required around septic fields. Depending upon how close the widened highway comes to the well head or septic field, there could be additional displacements. We made a power point presentation (which is available on the website) followed by a question and answer session (which will be summarized in meeting minutes that will be eventually posted on the website).

In general, many of the approximately 200 people in attendance objected to the study of Alt 4 Modified since there is already a master plan alignment for Midcounty Highway. We explained that we are conducting an environmental analysis to comply with NEPA because the impacts to wetlands and streams exceed one acre (thus the project does not qualify for a Corps general permit). We also explained that the NEPA process requires a rigorous analysis of alternatives, and that Alt 4 Modified was suggested as an alternative which appeared worthy of further analysis, based primarily on the fact that the county master plan already proposes the widening of Wightman, Snouffer School, and Muncaster Mill Roads to four lanes. We have recommended to the MCDOT a cross section width of 105 feet, which accommodates a four-lane divided highway, on-street bike lanes, a sidewalk on one side and a 10-foot wide shared use path on the other side (see the power point presentation for a detailed drawing).

The public was disappointed that the Corps was not in attendance to hear their concerns. One gentleman at the hearing asked whether the agencies

have ever been "on the ground" to visit Alt 4 Modified. The study team is providing a response to this gentleman. To help us with our response, if you ever reviewed any portion of the Alt 4 Modified corridor either to perform a windshield survey or field walk, could you let me know the dates?

Thanks.

Paul

**Subject:** Opposition to Alternative 4- Modified

My family and I have lived in The Points subdivision in Montgomery Village for over twenty years. During this time we have thoroughly enjoyed not only our home but also the tranquility and safety our lovely neighborhood provided. However, the thought of a proposed major highway located only a few feet from our back yard used solely to provide "traffic relief" to upcounty communities is deplorable. The impact this road would have on our community would be devastating. The greatly increased noise levels and pollution would have a huge negative affect on my as well as MANY other families located by the proposed highway; not to mention the destruction of beautiful landscaping as well as dividing Montgomery Village.

While attending the last meeting on this matter held at Goshen Elementary School, it was quite evident that of all the possible alternatives, number 4-modified, provided the most negative impact as well as the least number of favorable circumstances of any of the remaining possibilities. With all these reasons in mind, I ask all involved with the decision making on this project to eliminate Alternative 4-Modified from further consideration.

Thank you  
Bruce Sklar

**Subject:** Alternative 4-Modified to M-83

Dear Mr. Hwang,

Our community appreciates MC DOT's meeting with homeowners and others affected by Alt. 4 Modified to M-83 this past Tuesday evening.

I live in North Village, which abuts Wightman Rd and Snouffer's School Rd to our South and Goshen to the East of most of the community. I am Treasurer of our homes corporation. I have a question about the potential Wightman Rd widening that was not covered in the presentation or resident questions and a final comment.

How will the massive boulevard highway covered by Alt 4 Modified be accessed from our homes? Currently there is just one stoplight—at MV Ave, which becomes Pleasant ridge Drive at the entrance to our community—from Goshen Rd to Rt 27. Will there be more stoplights? Will there be some sort of limited access interchanges for the other North Village entry roads at Aspenwood Lane, Strath-Haven Drive, and Welbeck Way?

Or will residents need to get to Wightman or Snouffer's School and on to their destination via circuitous re-routing through North Village community streets?

North Village Homes Corporation owns the streets throughout the community and must pay for all upkeep of them through community assessments. Obviously, increased traffic will take a major toll in \$ for more frequent repair and repaving, much more traffic on our narrow streets, threats to safety of children, noise, pollution, and other headaches. Please answer this question above and make sure relevant costs are factored into your analysis of impacts on nearby residents.

Finally, I'd like to say, the northern sections of Montgomery Village have been very concerned that ANY widening of Wightman Rd to 4 lanes is threatening to us although some improvements in Wightman Rd will probably be needed. The planned widening of Wightman to the current 80' ROW will in itself be a significant intrusion into the Montgomery Village community, with its ramifications for traffic, reduced green space, noise, etc.

Alt-4 Modified to M-83 is a very different, and a catastrophic specter. It would be a chasm separating us from the rest of Montgomery Village. It demands significant property from us. It imposes a wide range of detriment to our quality of life and our cost of living, and threatens to wipe out home values.

I hope to hear from you with an answer to my question above.

Thank you for registering our concerns. We hope Alt 4-Modified disappears as quickly as it was thrust upon us.

Jeanne (and Ronald) Powell  
20316 Highland Hall Drive  
North Village, Montgomery Village

Alt 4 mod  
noise

**Dinne, John J NAB**

**From:** Vern Hutchison [vernhutch@hotmail.com]  
**Sent:** Wednesday, July 17, 2013 11:25 AM  
**To:** greg.hwang@montgomerycountymd.gov; Dinne, John J NAB; sean.mckewen@maryland.gov  
**Subject:** Midcounty Corridor Study

impact tree & green space  
property values  
traffic close proximity  
to homes  
access to roadway

Mr. Greg Hwang  
Mr. John Dinne  
Mr. Sean McKewen

Hello Gentleman:

As a concerned homeowner I would like to express my opposition to Alternative 4 Modified, Brink-Wightman-Goshen-Snouffer School-Muncaster Mill. This area contains a number of small neighborhoods that already sit close to Brink, Wightman, Snouffer School, Montgomery Village Ave and Warfield Rd. Expanding Brink-Wightman-Goshen-Snouffer School-Muncaster Mill will cause an enormous increase in noise from traffic as well as cut the already limited amount of grass and trees along the roads between the neighborhoods. It seems like one of the other alternatives will make a lot more sense. Alternative 4 Modified will also bring down property values in my neighborhood (Salems Grant) as well as create a burden entering and exiting the neighborhood. I feel very strongly that Alt 4 will cause a severe negative impact on our small community. Our community is just too small to handle this kind of modification.

Thank you for considering my feedback.

Vern Hutchison  
Homeowner  
Salems Grant, Montgomery Village

**To:** Dinne, John J NAB  
**Cc:** greg.hwang@montgomerycountymd.gov  
**Subject:** M-83 and alternatives

Dear Mr. Dinne,

I am writing regarding M-83 and the various alternatives to it that have been proposed. I live on Davis Mill Road, just off of Brink Road, in Germantown and hence will be adversely affected by the road construction and increased traffic regardless of which alternative is chosen.

Nevertheless, I recognize that there needs to be relief for the horrible traffic on I-270 as well as on local roads due to growth of Clarksburg and Damascus.

I have looked at the Draft Environmental Effects Report, have discussed the various proposals with neighbors, and have reached the following conclusions.

I am in favor of Alternative 9A.

This route has been part of the Master Plan for decades, and people and communities have planned, invested, and built accordingly.

The Draft Report states that alternatives 8 and 9 would provide the most relief from congestion on MD 355 and on major intersections throughout the region. Because alternative 9 would be a 4-lane limited access highway connecting MD 27 with the Mid County Highway, it would also offer significant relief to traffic on I-270.

Mass transit in the form of express bus traffic would be possible only on alternative 9.

9A has the lowest projected accident rate, shortest travel time, fewest intersecting roads and driveways, and the safest bike and pedestrian path.

I am strongly opposed to options 9B and 9D, which are not in the Master Plan, because they pass through established residential communities and the Agricultural Reserve, without offering any transportation advantage.

I am strongly opposed to Alternative 4 Modified.

It would pass through long established residential areas that were never planned for a major transportation corridor. Hundreds of homes would suddenly border a major highway.

It would intersect many driveways and other roads, thus limiting its efficiency.

Residents bordering the road would face problems of access into a multi-lane road with a raised median.

It would require the largest number of property acquisitions (including residential and business properties) of any of the proposed routes.

These and other problems led to the conclusion in the Draft Environmental Report (pg S-4) that Alternative 4 Modified would be the worst of all the proposed routes with respect to

"quality of life" and only moderately effective in reducing traffic congestion. In contrast, alternative 9 rated "High" in these and all other tests.

Since I live only ¼ mile from Brink Road, Alternative 4 Modified would decrease the value of my home due to greatly increased traffic volume and noise.

Thank you for your consideration of this matter.

Nancy Rice  
21417 Davis Mill Road  
Germantown, MD 20876

**Cc:** Dinne, John J NAB  
**Subject:** M-83 Project

Sean -

This project needs to be stopped immediately.

While speaking to hundreds of residents along the proposed route (option 8 & 9), I obtain an informal opinion poll and NOT ONE person I have spoke with can understand why this proposal remains on the list. Every single resident I have spoke with, the aged, young, latino, black, asian, white, handicapped - they ALL feel this proposal is insane. I have also run into people with deep roots in the area and years of following this proposal. I have uncovered some very disturbing information of which DOT has conspired to decieve you and us.

ENVIRONMENTAL IMPACT - According to DOT's canned presentation package (which will also be used on Aug 7), they claim the wetland impact will be 9 tenths of an acre. That's 9 tenths of an acre. This 4-lane elevated highway is supposed to span the floodplain wetlands. The floodplain wetlands are roughly a mile x 300 yards. How do you think they are planning on getting equipment that weighs 4-5 tons each down to the wetlands? Yes, a temporary road. And these temporary roads will need to be built all along the route. This equipment, with names like Magnum Force and Devastator, are designed to removed huge trees, moved tons and tons of dirt, bolders, limbs and anything that stand in their way. Nature is no match for this equipment (bulldozers, dump trucks, backhoes, front end loaders and many more) and the footprint left will last for centuries. The lives of all animals will be permanently ended. The micro-climate will be permanently altered. Where there were ponds and reeds and ferns and pools, there will be crusher run gravel, pavement, steel, cement walls and barriers which will block out the sun. This procedure, of creating temporary roads thru-out the route, will continue to the end of the route. I see construction projects in many areas of the county and although the finished product is permanently devastating to the environment, the construction does the destruction.

TREE RE-PLANTING PROGRAM - Did you know that DOT claims they will be re-planting trees to replace those removed? Yep, in Damascus, at one isolated location. Not along the route where the trees were removed, no, but to satisfy MDE requirements, they can claim they replanted. This is criminal. So for example, if 10,000 trees are removed, all of the re-planting will happen near the end of the route in Damascus. They can check it off as done !!

I have offered you to come out and walk just a portion of the route - the offer stands.

Bob Portanova  
Montgomery Village

**To:** Dinne, John J NAB  
**Cc:** greg.hwang@montgomerycountymd.gov  
**Subject:** MidCounty Highway Alternatives

Mr. Dinne:

We are strongly opposed to Alternative 4 Modified. It is completely incompatible with the Master Plans that are the basis for our community development. It is located well outside the central transportation corridor area it is supposed to support. Passing through an area of long established residential areas with many individual driveways and multiple intersecting roads increases the gridlock and affects safety. This in turn generates excessive air pollution and carbon dioxide emissions. My home is on a designated rustic road off of Brink Road and preserving the natural character of the land and homes in this small area is paramount. This is one of the few remaining areas of Montgomery County that has not been overdeveloped and should be protected from the additional traffic, noise and pollution of this proposal.

I strongly support the completion of the Midcounty Highway along the Master Plan route - Alternative 9, Option A. All adjacent communities were developed and occupied with notice of this roadway. It is designed to minimize interference with communities and existing roads. It will allow an efficient traffic flow, minimizing travel time, air pollution and carbon dioxide emissions. It will tie existing roads together into a coherent transportation system and allow optimal communication between upcounty residential communities, employment centers, and commercial areas. It can provide the backbone for an effective bus system

The Master Planned M-83 is long overdue and badly needed.

Elizabeth and Gary Mosesman

21515 Davis Mill Rd.

**Sent:** Thursday, July 25, 2013 1:35 PM  
**To:** Dinne, John J NAB  
**Subject:** Midcounty Corridor Study

Dear Mr. Dinne:

This message is a comment with regard to the Joint Public Hearing for the Midcounty Corridor Study, scheduled for August 7 in Germantown, Maryland .

I am most grateful to the U. S. Army Corps of Engineers (COE) and Maryland Department of the Environment (MDE) for your efforts to protect the sensitive, high biodiversity area in the upper reaches of the Dayspring Creek valley by suggesting alternatives to the route of the proposed highway that would lessen the impact on this special area.

I am also grateful for the work that has been done in the Midcounty Corridor Study to define the impacts of the proposed highway on plant and animal life and water quality in the forests and stream valleys that would be lost or degraded should this highway be built.

In my view, however, the Study falls short of being an adequate base on which to permit this project to move forward, in two major respects.

1.

The study fails to address transit alternatives in any serious way. To begin with the Purpose and Goals section (with which I realize you have already concurred) is weighted toward purposes and needs which are best served by a new highway, rather than toward purposes that provide better transportation overall for this area of the County. While reducing congestion, improving safety, and enhancing homeland security may be worthy needs, there is a strong assumption that only a new highway can accomplish this.

What if, instead, the purpose and need were centered around the transportation system as a whole and included needs such as protecting remaining green spaces (forests and stream valleys), reducing greenhouse gas emissions, and being low in cost? What if improving quality of life was measured not only in terms of commuting times, but also in terms of accessible green spaces for people and wildlife to enjoy?

Further, this otherwise very thorough Study has only a page and a half devoted to transit, which only looks at transit projects already under study, and then dismisses them as having no relevance, or not in current County plans for implementation. The Study does not consider in any way how 21st Century transit possibilities such as bus rapid transit might play a role in alternatives to address the transportation needs of this part of the County.

2.

The Study fails to consider alternatives which would combine better transportation management strategies, with selected widening of existing roads, and with innovative transit possibilities. The process of only considering these alternatives standing alone naturally favors a result indicating that each would serve less well than a new highway. Quite possibly an analysis of an alternative that combined better transportation management strategies, widening selected existing roads, and major innovating upgrades in transit would show that this combined alternative would outperform the proposed new road, preserve vital green space in forest and stream valleys, and be significantly lower in cost.

I urge you to strongly consider whether or not this Study is adequately done, and I hope you agree that its shortcomings preclude issuing permits at this time.

Sincerely,  
James L. Hall

Assuming you are still accepting public comment

I have had a chance to attend 1 public hearing and review the various materials on the subject of the various options

Clearly the best option remains the original alignment

Option 4 - trying to cram the road on Wightman through Montgomery Village is too much impact to existing homes, there is not enough room to put this kind of road through that tight a space. Someday the need might arise to make it 6 lanes and there would be NO Option for expansion. Further up the road on Brink there is unfair impact to homes that purchased assuming the master plan.

Option 2, 5, 8 - to push traffic from a 6 lane road over onto busy 355 makes no sense and will only impact the flow of traffic on both roads - dumb

Option 1 - not an option

Option 9 is best - as for 9A, B and D, don't really care.

**Follow Up Flag:** Follow up  
**Flag Status:** Flagged

We have struggled against this highway through our community for 27 years. This has had a negative impact on our health, both physical and mental. Our health cannot be restored and the years that have been lost due to worry and stress cannot be returned to us.

Before we moved to Kaul Lane, off of Brink Road, I called the DOT and asked if Brink was going to be widened. I was assured by the person who answered the phone that Brink was not going to be widened, that is there were no plans to change Brink Road. This was in 1986 when the M-83 was firmly on the Master Plan. Then all of sudden an aggressive campaign was launched by two individuals in Montgomery Village who bought their house in 1986 or 87 knowing that the M-83 was to be built near their house. They have given the impression that the village is supporting them on widening Goshen and Wightman Roads which is not true. We took a survey and found that 99 percent of the people living in Montgomery Village opposed the widening of Goshen Road and the Montgomery Village people living on Wightman road are adamant against putting the highway through their community.

Our health has been impaired by this constant stress brought about by the road issue which will destroy our unique and beautiful community. Goshen is the most beautiful area in Montgomery County, the horse farms, the landscape, the natural environment. We have over two acres of land and most of us are on septic. Each resident along Brink and Wightman Roads probably needs at least \$1.5 million dollars or more to find a comparable place to live. In addition, our health has deteriorated due to the stress that has continued for 27 years.

A lot of people have allergies and asthma and cannot live next to such a monstrosity. I look at Montrose and it is frightening as to the damage that is being done to other communities with these highways/parkways. I travelled that road for 30 years to and from work and, of course, there was traffic but nothing that would warrant that type of destruction. The Kettler community there had lovely homes but now their back yards are loped off and a retaining wall built to "protect" the community from the noise, pollution, etc.

This M-83 has been on the Master Plan since the mid-1960s. Why wasn't it built instead of conducting expensive studies for the last 30 years.

Dear Midcounty Corridor Study Community:

This email is to inform you of the upcoming Joint Public Hearing for the Midcounty Corridor Study (MCS).

If you have received MCS newsletters in the past, then you will be receiving a hard copy of the Public Notice. You may also download the Public Notice  
<[http://www.montgomerycountymd.gov/corridor/Resources/Files/pdf/PublicHearing/PublicNotice\\_130621.pdf](http://www.montgomerycountymd.gov/corridor/Resources/Files/pdf/PublicHearing/PublicNotice_130621.pdf)> .

JOINT PUBLIC HEARING      DATE-LOCATION-TIME-PURPOSE

Wednesday, August 7, 2013

Seneca Valley High School, Cafeteria& Auditorium

19401 Crystal Rock Drive, Germantown, MD 20874

Poster (Display) Session @ Cafeteria: 4:30-6:30 PM

Public Testimony @ Auditorium: 6:30-10:30 PM

The Joint Public Hearing will be hosted by the U. S. Army Corps of Engineers (COE) and Maryland Department of the Environment (MDE). The purpose is to provide the public an opportunity to present views, opinions and information which will be considered by COE/MDE in evaluating Montgomery County Department of Transportation's (MCDOT) permit application.

SIGN-UP FOR TESTIMONY

Public hearing sign-up begins at 4:30 pm on the same day as the Joint Public Hearing, August 7, 2013. Sing-up sheets will be available in the auditorium. If we are unable to accommodate you on the speaker's list, you may provide testimony in writing which will be included in the record. Your written testimony will be given the same consideration as oral testimony. Please forward any comments or written testimony to:

Greg,

When the COE conducted their study, did they include the new wetlands north of Brink Road and east of Huntmaster Road. These wetlands include 20 acres of forested wetlands, 9 acres of riparian floodplain forest near the stream and 9 acres of upland forest habitat. A total of 56 acres of wetlands. These wetlands would be affected if there is a disturbance at Great Seneca Creek Bridge. Mr. Hurley, a local historian and a resident of Montgomery Village,

said that it would be an ecological disaster if the flood plains at Great Seneca Creek Bridge are disturbed. These flood plains act as a sponge and prevent flooding down stream in Montgomery Village.

**Subject:** Citizen Objection to Midcounty Corridor Study (MCS) M83 Option 4 and U.S. Army Corps of Engineers Interference With Montgomery County Self-Determination  
**Attachments:** RE: Midcounty Corridor Study (MCS) Alternatives Assessed

November 20, 2011

Mr. Greg Hwang  
100 EdisonPark Dr., 4th Floor  
Gaithersburg, Maryland 20878

Dear Greg,

As a citizen of Montgomery County, I would like to register my objection to M83 Option 4 and the U.S. Army Corps of Engineers interference with Montgomery County self determination and ask that it be made part of the public record at the County, State, and Federal level.

Analysis of the Midcounty Corridor Study (MCS) study reveals that Alternative 4 Modified (Goshen-Brink-etc) is the most unacceptable alternative by a wide margin. It presents the least improvement in travel time, the highest number of conflict points, the highest impact to residential properties, the highest historic properties affected, and is not consistent with the Master Plan.

The U.S. Army Corps of Engineers chose to insulate itself from the feelings and sentiments of the citizens of Montgomery County whom it is impacting by refusing the MCDOT invitation to attend the public MCDOT hearing, attended by hundreds of concerned citizens on September 27, 2011. As a result, the Corps missed the opportunity to hear first hand the voices of the people who are being ignored by an interfering government bureaucracy. Despite the citizen opposition, the U.S. Army Corps of Engineers insists that this alternative be retained for detailed analysis in the study. The cost of the study is \$1.2M.

Operating out of Philadelphia once the cradle of democracy, this agency tinkers with the quality of life in Montgomery County. The Corps has no standing on the issues important to our community yet has sole approval authority. The lack of standing of the U.S. Corps of Engineers in the affairs of Montgomery County stands in contrast to the minimum time spent by the Corps in the County totaling four days from December 2006 through February 2011 (see forwarded email from Bruce E. Johnston, Chief, Division of Transportation, MCDOT). What right does the Corps have to dictate, control, and destroy the future of our community?

It is well known that M83 Option 4 is not the preferred alternative yet its continued presence in the planning process serves to distress the residents of Montgomery Village and vicinity, some of whom exercised due diligence in interacting with the Montgomery County planning department and were misled as the rules changed midstream and the U.S. Army Corps of Engineers became the decider.

I urge the County, State, and Federal agencies to respect Montgomery County's right to self-determination and to take charge of the situation by immediately eliminating M83 Option 4 from further consideration and thereby sparing the citizens most affected any further distress.

Don O'Neill  
Montgomery Village

**Subject:** Reject M83 (Midcounty Highway Extended)

**Follow Up Flag:** Follow up  
**Flag Status:** Flagged

Dear Mr. Hwang,

On M-83: Alternatives 4, 8, and 9 would have a major impact on wetlands. Construction, stormwater runoff, and the secondary impacts of nearby development, would enable the destruction and degradation of wetlands and irreplaceable water resources in the upcounty area.

To move forward and give some traffic relief, the most viable build-out is Alternative 2, which proposes upgrades to MD355. It costs the least, has the least impacts, and enables the development of high quality Rapid Transit connecting Clarksburg to Gaithersburg and points south.

The County's own traffic analysis admits none of the more costly alternatives perform any better than utilizing our existing roadways. For the same cost of M83, estimated at up to \$700 million, improve existing roadways while implementing the Rapid Transit System to connect Clarksburg to the rest of the County. Work with Amtrak and MARC train systems as well, to provide immediate, alternative transit along existing railbeds for community members.

The upcounty area was promised transit and the rug is being pulled out from beneath us without action to at least this vital road way, Rt 355. Improvements are being made to the lower portion - why not here, why not now?

Greg, OK, I thought I had looked at all the Options, but I didn't see Option 9. OK, so there IS an option for extending and completing Mid County as originally planned.

Now, my question becomes: Why was Mid County Highway never completed in the first place? Seems to me that would have been, and still is, the most logical alternative.

George

**Subject:** MID - COUNTY CORRIDOR ALTERNATIVES

Hi Greg,

I will be away next week (well-deserved vacation) so I can't attend the open forum/public open house at SVHS. I did have a couple of questions.

It's been a number of years, I noticed, since the need was identified and it seems pretty well studied at this point.

My BIG question - Among the various alternatives, unless I am missing something, where is the alternative that actually EXTENDS Mid-County Highway DIRECTLY from where it now ends at Montgomery Village Avenue out through Middlebrook Road (it appears that some construction was started at some point)? I see all sorts of options that include widening OTHER roads, etc., but NONE (unless I missed it) that actually COMPLETES Mid - County Highway as it was originally planned.

Please let me know.

Thanks,

George Tobin  
Montgomery Village, MD

Dear Mr. Hwang,

I urge you to reject the permit application for M83, the Midcounty Highway Extended. This destructive new highway project will have serious environmental and community impacts, and comes at a time when we should consider real transit alternatives to new highway construction to help plan for a sustainable future for Montgomery County.

Thank you,

C. Test Bassett  
Street  
City, MD 20782

Dear Mr. Hwang,

I urge you to reject the permit application for M83, the Midcounty Highway Extended. This destructive new highway project will have serious environmental and community impacts, and comes at a time when we should consider real transit alternatives to new highway construction to help plan for a sustainable future for Montgomery County.

The most pressing issue for next week's public hearing about M83 is the potential impact on wetlands and our aquatic resources. Alternatives 4, 8, or 9 (alternatives that entail new construction, rather than upgrading existing roads) would travel through wetlands and important stream valleys. Montgomery County Department of Transportation (MCDOT) says only 0.9 acres of wetlands would be impacted because they are proposing to build bridges over these areas. Yet it's clear that the construction process to build those bridges -- including temporary access roads to bring in bull dozers and heavy equipment -- will necessitate filling in wetland areas and compacting soil that is key to filtration and other ecosystem functions.

Longer term, new impermeable surfaces directly over the wetlands will drive more polluted stormwater runoff into these important natural resources, which are already threatened by potential increases in impervious surfaces from nearby developments like Ten Mile Creek.

In addition to wetland impacts, there are several key environmental and community issues to consider. Alternatives 4, 8, and 9 of M83 would cause the destruction of up to 67 acres of forests, 48 acres of park land, and 31 acres of prime farmland. It would attract more traffic, causing more air pollution and carbon emissions. Finally, it would divide existing communities and bring associated health and noise impacts.

The only acceptable alternative proposed is Alternative 2, which proposes upgrades to MD355. It costs the least, has the least impacts, and enables the development of high quality Rapid Transit connecting Clarksburg to Gaithersburg and points south. The County's own traffic analysis admits none of the more costly alternatives perform any better than utilizing our existing roadways. For the same cost of M83, estimated at up to \$700 million, we could improve existing roadways while implementing the Rapid Transit System to connect Clarksburg to the rest of the County. While MCDOT's report says that Rapid Transit is too early in the process to consider, I believe it would be a mistake to not evaluate a real transit alternative to this highway which will severely impact our natural resources and neighborhoods.

There are many reasons to oppose this project, including its impact on wetlands. Please consider the full impact of construction, stormwater runoff, and the secondary impacts of nearby development, and reject the permit for this project that would enable the destruction and degradation of our wetlands and water resources.

Signed,

Dena Picken

This destructive new highway project will have serious environmental and community impacts, and comes at a time when we should consider real transit alternatives to new highway construction to help plan for a sustainable future for Montgomery County.

The most pressing issue for next week's public hearing about M83 is the potential impact on wetlands and our aquatic resources. Alternatives 4, 8, or 9 (alternatives that entail new construction, rather than upgrading existing roads) would travel through wetlands and important stream valleys. Montgomery County Department of Transportation (MCDOT) says only 0.9 acres of wetlands would be impacted because they are proposing to build bridges over these areas. Yet it's clear that the construction process to build those bridges -- including temporary access roads to bring in bull dozers and heavy equipment -- will necessitate filling in wetland areas and compacting soil that is key to filtration and other ecosystem functions.

Longer term, new impermeable surfaces directly over the wetlands will drive more polluted stormwater runoff into these important natural resources, which are already threatened by potential increases in impervious surfaces from nearby developments like Ten Mile Creek.

In addition to wetland impacts, there are several key environmental and community issues to consider. Alternatives 4, 8, and 9 of M83 would cause the destruction of up to 67 acres of forests, 48 acres of park land, and 31 acres of prime farmland. It would attract more traffic, causing more air pollution and carbon emissions. Finally, it would divide existing communities and bring associated health and noise impacts.

The only acceptable alternative proposed is Alternative 2, which proposes upgrades to MD355. It costs the least, has the least impacts, and enables the development of high quality Rapid Transit connecting Clarksburg to Gaithersburg and points south. The County's own traffic analysis admits none of the more costly alternatives perform any better than utilizing our existing roadways. For the same cost of M83, estimated at up to \$700 million, we could improve existing roadways while implementing the Rapid Transit System to connect Clarksburg to the rest of the County. While MCDOT's report says that Rapid Transit is too early in the process to consider, I believe it would be a mistake to not evaluate a real transit alternative to this highway which will severely impact our natural resources and neighborhoods.

There are many reasons to oppose this project, including its impact on wetlands. Please consider the full impact of construction, stormwater runoff, and the secondary impacts of nearby development, and reject the permit for this project that would enable the destruction and degradation of our wetlands and water resources.

Signed,

Montgomery County Department of Transportation (MCDOT) says only 0.9 acres of wetlands would be impacted because they are proposing to build bridges over these areas. Yet it's clear that the construction process to build those bridges -- including temporary access roads to bring in bull dozers and heavy equipment -- will necessitate filling in wetland areas and compacting soil that is key to filtration and other ecosystem functions.

Longer term, new impermeable surfaces directly over the wetlands will drive more polluted stormwater runoff into these important natural resources, which are already threatened by potential increases in impervious surfaces from nearby developments like Ten Mile Creek.

In addition to wetland impacts, there are several key environmental and community issues to consider. Alternatives 4, 8, and 9 of M83 would cause the destruction of up to 67 acres of forests, 48 acres of park land, and 31 acres of prime farmland. It would attract more traffic, causing more air pollution and carbon emissions. Finally, it would divide existing communities and bring associated health and noise impacts.

The only acceptable alternative proposed is Alternative 2, which proposes upgrades to MD355. It costs the least, has the least impacts, and enables the development of high quality Rapid Transit connecting Clarksburg to Gaithersburg and points south. The County's own traffic analysis admits none of the more costly alternatives perform any better than utilizing our existing roadways. For the same cost of M83, estimated at up to \$700 million, we could improve existing roadways while implementing the Rapid Transit System to connect Clarksburg to the rest of the County. While MCDOT's report says that Rapid Transit is too early in the process to consider, I believe it would be a mistake to not evaluate a real transit alternative to this highway which will severely impact our natural resources and neighborhoods.

There are many reasons to oppose this project, including its impact on wetlands. Please consider the full impact of construction, stormwater runoff, and the secondary impacts of nearby development, and reject the permit for this project that would enable the destruction and degradation of our wetlands and water resources.

Signed,

Christopher Ecker

Dear Mr. Hwang,

Dear planners:

I kindly request that you reject the permit application for M83, the Midcounty Highway Extended. This destructive new highway project will have serious environmental and community impacts, and comes at a time when we should consider real transit alternatives to new highway construction to help plan for a sustainable future for Montgomery County.

The increased air pollution and additional sprawl development that the project will create will harm our local environment, but the most pressing issue is the project's potential impact on wetlands and our aquatic resources. In addition to wetland impacts, there are several key environmental issues to consider.

The only acceptable alternative proposed is Alternative 2, which makes the best use of our existing infrastructure by making improvements to MD355. It costs the least, has the least impact on the community and our environment, and enables the development of a high quality Rapid Transit service connecting Clarksburg to Gaithersburg and points south. The County's own traffic analysis admits that none of the more costly alternatives perform any better than utilizing our existing roadways. For the same cost of building M83's favored Alightment 9, estimated to be up to \$700 million, we could improve existing roadways while implementing the Rapid Transit System to connect Clarksburg to the rest of the County.

There are many reasons to oppose this project. I wish to weigh in on its impacts on the community, air quality, land use and wetlands. Please consider the full impact of construction, stormwater runoff, and the secondary impacts of nearby development, and reject the permit for this project that would enable the destruction of wetlands and the degradation of our important water resources.

Thank you,

Tsedal Bahta  
8712 Colesville Rd

Dear Mr. Hwang,

I urge you to reject the permit application for M83, the Midcounty Highway Extended. We should be putting our resources toward bus rapid transit rather than more roads.

The only acceptable alternative proposed is Alternative 2, which makes the best use of our existing infrastructure by making improvements to MD355. It costs the least, has the least impact on the community and our environment, and enables the development of a high quality Rapid Transit service connecting Clarksburg to Gaithersburg and points south. The County's own traffic analysis admits that none of the more costly alternatives perform any better than utilizing our existing roadways. For the same cost of building M83's favored Alightment 9, \$350-\$700 million, we could build Alternative 2 and implement bus rapid transit from Clarksburg all the way to Friendship Heights. While MCDOT's report says that Rapid Transit is too early in the process to consider, I believe it would be an enormous mistake to move forward without due diligence on a real transit alternative to this highway which will severely impact our natural resources and neighborhoods.

There are many reasons to oppose this project. Today, I wish to weigh in on its impacts on wetlands. Please consider the full impact of construction, stormwater runoff, and the secondary impacts of nearby development, and reject the permit for this project that would enable the destruction of wetlands and the degradation of our important water resources.

Thank you,

Peter Dean

I urge you to reject the permit application for M83, the Midcounty Highway Extended. This destructive new highway project will have serious environmental and community impacts, and comes at a time when we should consider real transit alternatives to new highway construction to help plan for a sustainable future for Montgomery County.

The most pressing issue for next week's public hearing about M83 is the potential impact on wetlands and our aquatic resources. Alternatives 4, 8, or 9 (alternatives that entail new construction, rather than upgrading existing roads) would travel through wetlands and important stream valleys. Montgomery County Department of Transportation (MCDOT) says only 0.9 acres of wetlands would be impacted because they are proposing to build bridges over these areas. Yet it's clear that the construction process to build those bridges -- including temporary access roads to bring in bull dozers and heavy equipment -- will necessitate filling in wetland areas and compacting soil that is key to filtration and other ecosystem functions.

Longer term, new impermeable surfaces directly over the wetlands will drive more polluted stormwater runoff into these important natural resources, which are already threatened by potential increases in impervious surfaces from nearby developments like Ten Mile Creek.

In addition to wetland impacts, there are several key environmental and community issues to consider. Alternatives 4, 8, and 9 of M83 would cause the destruction of up to 67 acres of forests, 48 acres of park land, and 31 acres of prime farmland. It would attract more traffic, causing more air pollution and carbon emissions. Finally, it would divide existing communities and bring associated health and noise impacts.

The only acceptable alternative proposed is Alternative 2, which proposes upgrades to MD355. It costs the least, has the least impacts, and enables the development of high quality Rapid Transit connecting Clarksburg to Gaithersburg and points south. The County's own traffic analysis admits none of the more costly alternatives perform any better than utilizing our existing roadways. For the same cost of M83, estimated at up to \$700 million, we could improve existing roadways while implementing the Rapid Transit System to connect Clarksburg to the rest of the County. While MCDOT's report says that Rapid Transit is too early in the process to consider, I believe it would be a mistake to not evaluate a real transit alternative to this highway which will severely impact our natural resources and neighborhoods.

There are many reasons to oppose this project, including its impact on wetlands. Please consider the full impact of construction, stormwater runoff, and the secondary impacts of nearby development, and reject the permit for this project that would enable the destruction and degradation of our wetlands and water resources.

Signed,

Kathy Carey

Alternatives 4, 8, or 9 (alternatives that entail new construction, rather than upgrading existing roads) would travel through wetlands and important stream valleys. Montgomery County Department of Transportation (MCDOT) says only 0.9 acres of wetlands would be impacted because they are proposing to build bridges over these areas. Yet it's clear that the construction process to build those bridges -- including temporary access roads to bring in bull dozers and heavy equipment -- will necessitate filling in wetland areas and compacting soil that is key to filtration and other ecosystem functions.

Longer term, new impermeable surfaces directly over the wetlands will drive more polluted stormwater runoff into these important natural resources, which are already threatened by potential increases in impervious surfaces from nearby developments like Ten Mile Creek.

In addition to wetland impacts, there are several key environmental and community issues to consider. Alternatives 4, 8, and 9 of M83 would cause the destruction of up to 67 acres of forests, 48 acres of park land, and 31 acres of prime farmland. It would attract more traffic, causing more air pollution and carbon emissions. Finally, it would divide existing communities and bring associated health and noise impacts.

The only acceptable alternative proposed is Alternative 2, which proposes upgrades to MD355. It costs the least, has the least impacts, and enables the development of high quality Rapid Transit connecting Clarksburg to Gaithersburg and points south. The County's own traffic analysis admits none of the more costly alternatives perform any better than utilizing our existing roadways. For the same cost of M83, estimated at up to \$700 million, we could improve existing roadways while implementing the Rapid Transit System to connect Clarksburg to the rest of the County. While MCDOT's report says that Rapid Transit is too early in the process to consider, I believe it would be a mistake to not evaluate a real transit alternative to this highway which will severely impact our natural resources and neighborhoods.

There are many reasons to oppose this project, including its impact on wetlands. Please consider the full impact of construction, stormwater runoff, and the secondary impacts of nearby development, and reject the permit for this project that would enable the destruction and degradation of our wetlands and water resources.

Dear Mr. Hwang,

I urge you to reject the permit application for M83, the Midcounty Highway Extended. This destructive new highway project will have serious environmental and community impacts, and comes at a time when we should consider real transit alternatives to new highway construction to help plan for a sustainable future for Montgomery County.

The most pressing issue for next week's public hearing about M83 is the potential impact on wetlands and our aquatic resources. Alternatives 4, 8, or 9 (alternatives that entail new construction, rather than upgrading existing roads) would travel through wetlands and important stream valleys. Montgomery County Department of Transportation (MCDOT) says only 0.9 acres of wetlands would be impacted because they are proposing to build bridges over these areas. Longer term, new impermeable surfaces directly over the wetlands will drive more polluted stormwater runoff into these important natural resources, which are already threatened by potential increases in impervious surfaces from nearby developments like Ten Mile Creek.

In addition to wetland impacts, there are several key environmental and community issues to consider. Alternatives 4, 8, and 9 of M83 would cause the destruction of up to 67 acres of forests, 48 acres of park land, and 31 acres of prime farmland. It would attract more traffic, causing more air pollution and carbon emissions. Finally, it would divide existing communities and bring associated health and noise impacts.

The only acceptable alternative proposed is Alternative 2, which proposes upgrades to MD355. It costs the least, has the least impacts, and enables the development of high quality Rapid Transit connecting Clarksburg to Gaithersburg and points south. The County's own traffic analysis admits none of the more costly alternatives perform any better than utilizing our existing roadways. For the same cost of M83, estimated at up to \$700 million, we could improve existing roadways while implementing the Rapid Transit System to connect Clarksburg to the rest of the County. While MCDOT's report says that Rapid Transit is too early in the process to consider, I believe it would be a mistake to not evaluate a real transit alternative to this highway which will severely impact our natural resources and neighborhoods.

There are many reasons to oppose this project, including its impact on wetlands. Please consider the full impact of construction, stormwater runoff, and the secondary impacts of nearby development, and reject the permit for this project that would enable the destruction and degradation of our wetlands and water resources.

Signed,

Rachel Unger

Dear Mr. Hwang,

I urge you to reject the permit application for M83, the Midcounty Highway Extended. This destructive new highway project will have serious environmental and community impacts, and comes at a time when we should consider real transit alternatives to new highway construction to help plan for a sustainable future for Montgomery County.

The most pressing issue for next week's public hearing about M83 is the potential impact on wetlands and our aquatic resources. Alternatives 4, 8, or 9 (alternatives that entail new construction, rather than upgrading existing roads) would travel through wetlands and important stream valleys. Montgomery County Department of Transportation (MCDOT) says only 0.9 acres of wetlands would be impacted because they are proposing to build bridges over these areas. Yet it's clear that the construction process to build those bridges -- including temporary access roads to bring in bull dozers and heavy equipment -- will necessitate filling in wetland areas and compacting soil that is key to filtration and other ecosystem functions.

Longer term, new impermeable surfaces directly over the wetlands will drive more polluted stormwater runoff into these important natural resources, which are already threatened by potential increases in impervious surfaces from nearby developments like Ten Mile Creek.

In addition to wetland impacts, there are several key environmental and community issues to consider. Alternatives 4, 8, and 9 of M83 would cause the destruction of up to 67 acres of forests, 48 acres of park land, and 31 acres of prime farmland. The only acceptable alternative proposed is Alternative 2, which proposes upgrades to MD355. It costs the least, has the least impacts, and enables the development of high quality Rapid Transit connecting Clarksburg to Gaithersburg and points south. The County's own traffic analysis admits none of the more costly alternatives perform any better than utilizing our existing roadways. For the same cost of M83, estimated at up to \$700 million, we could improve existing roadways while implementing the Rapid Transit System to connect Clarksburg to the rest of the County. While MCDOT's report says that Rapid Transit is too early in the process to consider, I believe it would be a mistake to not evaluate a real transit alternative to this highway which will severely impact our natural resources and neighborhoods.

There are many reasons to oppose this project, including its impact on wetlands. Please consider the full impact of construction, stormwater runoff, and the secondary impacts of nearby development, and reject the permit for this project that would enable the destruction and degradation of our wetlands and water resources.

Signed,

Laura Adkins

Dear Mr. Hwang,

I urge you to reject the permit application for M83, the Midcounty Highway Extended. This destructive new highway project will have serious environmental and community impacts, and comes at a time when we should consider real transit alternatives to new highway construction to help plan for a sustainable future for Montgomery County.

The most pressing issue for next week's public hearing about M83 is the potential impact on wetlands and our aquatic resources. Alternatives 4, 8, or 9 (alternatives that entail new construction, rather than upgrading existing roads) would travel through wetlands and important stream valleys. Montgomery County Department of Transportation (MCDOT) says only 0.9 acres of wetlands would be impacted because they are proposing to build bridges over these areas. Yet it's clear that the construction process to build those bridges -- including temporary access roads to bring in bull dozers and heavy equipment -- will necessitate filling in wetland areas and compacting soil that is key to filtration and other ecosystem functions.

Longer term, new impermeable surfaces directly over the wetlands will drive more polluted stormwater runoff into these important natural resources, which are already threatened by potential increases in impervious surfaces from nearby developments like Ten Mile Creek.

In addition to wetland impacts, there are several key environmental and community issues to consider. Alternatives 4, 8, and 9 of M83 would cause the destruction of up to 67 acres of forests, 48 acres of park land, and 31 acres of prime farmland. It would attract more traffic, causing more air pollution and carbon emissions. Finally, it would divide existing communities and bring associated health and noise impacts.

The only acceptable alternative proposed is Alternative 2, which proposes upgrades to MD355. It costs the least, has the least impacts, and enables the development of high quality Rapid Transit connecting Clarksburg to Gaithersburg and points south. The County's own traffic analysis admits none of the more costly alternatives perform any better than utilizing our existing roadways. For the same cost of M83, estimated at up to \$700 million, we could improve existing roadways while implementing the Rapid Transit System to connect Clarksburg to the rest of the County. While MCDOT's report says that Rapid Transit is too early in the process to consider, I believe it would be a mistake to not evaluate a real transit alternative to this highway which will severely impact our natural resources and neighborhoods.

There are many reasons to oppose this project, including its impact on wetlands. Please consider the full impact of construction, stormwater runoff, and the secondary impacts of nearby development, and reject the permit for this project that would enable the destruction and degradation of our wetlands and water resources.

Signed,

Betty Romero

Dear Mr. Hwang,

I urge you to reject the permit application for M83, the Midcounty Highway Extended. This destructive new highway project will have serious environmental and community impacts, and comes at a time when we should consider real transit alternatives to new highway construction to help plan for a sustainable future for Montgomery County.

The most pressing issue for next week's public hearing about M83 is the potential impact on wetlands and our aquatic resources. Alternatives 4, 8, or 9 (alternatives that entail new construction, rather than upgrading existing roads) would travel through wetlands and important stream valleys. Montgomery County Department of Transportation (MCDOT) says only 0.9 acres of wetlands would be impacted because they are proposing to build bridges over these areas. Yet it's clear that the construction process to build those bridges -- including temporary access roads to bring in bull dozers and heavy equipment -- will necessitate filling in wetland areas and compacting soil that is key to filtration and other ecosystem functions.

Longer term, new impermeable surfaces directly over the wetlands will drive more polluted stormwater runoff into these important natural resources, which are already threatened by potential increases in impervious surfaces from nearby developments like Ten Mile Creek.

In addition to wetland impacts, there are several key environmental and community issues to consider. Alternatives 4, 8, and 9 of M83 would cause the destruction of up to 67 acres of forests, 48 acres of park land, and 31 acres of prime farmland. It would attract more traffic, causing more air pollution and carbon emissions. Finally, it would divide existing communities and bring associated health and noise impacts.

The only acceptable alternative proposed is Alternative 2, which proposes upgrades to MD355. It costs the least, has the least impacts, and enables the development of high quality Rapid Transit connecting Clarksburg to Gaithersburg and points south. The County's own traffic analysis admits none of the more costly alternatives perform any better than utilizing our existing roadways. For the same cost of M83, estimated at up to \$700 million, we could improve existing roadways while implementing the Rapid Transit System to connect Clarksburg to the rest of the County. While MCDOT's report says that Rapid Transit is too early in the process to consider, I believe it would be a mistake to not evaluate a real transit alternative to this highway which will severely impact our natural resources and neighborhoods.

There are many reasons to oppose this project, including its impact on wetlands. Please consider the full impact of construction, stormwater runoff, and the secondary impacts of nearby development, and reject the permit for this project that would enable the destruction and degradation of our wetlands and water resources.

MCDOT should be called MCHD, Montgomery County Highway Department. That's all they know how to do. When you are a hammer, every problem looks like a nail. They need to be reined in and modernized. This is not the 1950s.

Signed,

Steven Cook

Dear Mr. Hwang,

I urge you to reject the permit application for M83, the Midcounty Highway Extended. As a 25 year resident of Montgomery Village, I am vehemently against this construction, which ultimately is not the long-term answer to traffic congestion and will destroy the environment and decimate our economically and racially diverse community. It is irresponsible and unwarranted to build a highway when viable alternatives are available, such as improvements to existing roads and sponsorship of mass transit alternatives.

The most pressing issue for next week's public hearing about M83 is the potential impact on wetlands and our aquatic resources. Alternatives 4, 8, or 9 (alternatives that entail new construction, rather than upgrading existing roads) would travel through wetlands and important stream valleys. While MCDOT's report says that Rapid Transit is too early in the process to consider, I believe it would be a mistake to not evaluate a real transit alternative to this highway which will severely impact our natural resources and neighborhoods.

There are many reasons to oppose this project, including its impact on wetlands. Please consider the full impact of construction, stormwater runoff, and the secondary impacts of nearby development, and reject the permit for this project that would enable the destruction and degradation of our wetlands and water resources.

Dear Mr. Hwang,

I urge you to reject the permit application for M83, the Midcounty Highway Extended. This destructive new highway project will have serious environmental and community impacts, and comes at a time when we should consider real transit alternatives to new highway construction to help plan for a sustainable future for Montgomery County.

The most pressing issue for next week's public hearing about M83 is the potential impact on wetlands and our aquatic resources. Alternatives 4, 8, or 9 (alternatives that entail new construction, rather than upgrading existing roads) would travel through wetlands and important stream valleys. Montgomery County Department of Transportation (MCDOT) says only 0.9 acres of wetlands would be impacted because they are proposing to build bridges over these areas. Yet it's clear that the construction process to build those bridges -- including temporary access roads to bring in bull dozers and heavy equipment -- will necessitate filling in wetland areas and compacting soil that is key to filtration and other ecosystem functions.

Longer term, new impermeable surfaces directly over the wetlands will drive more polluted stormwater runoff into these important natural resources, which are already threatened by potential increases in impervious surfaces from nearby developments like Ten Mile Creek.

In addition to wetland impacts, there are several key environmental and community issues to consider. Alternatives 4, 8, and 9 of M83 would cause the destruction of up to 67 acres of forests, 48 acres of park land, and 31 acres of prime farmland. It would attract more traffic, causing more air pollution and carbon emissions. Finally, it would divide existing communities and bring associated health and noise impacts.

The only acceptable alternative proposed is Alternative 2, which proposes upgrades to MD355. It costs the least, has the least impacts, and enables the development of high quality Rapid Transit connecting Clarksburg to Gaithersburg and points south. The County's own traffic analysis admits none of the more costly alternatives perform any better than utilizing our existing roadways. For the same cost of M83, estimated at up to \$700 million, we could improve existing roadways while implementing the Rapid Transit System to connect Clarksburg to the rest of the County. While MCDOT's report says that Rapid Transit is too early in the process to consider, I believe it would be a mistake to not evaluate a real transit alternative to this highway which will severely impact our natural resources and neighborhoods.

There are many reasons to oppose this project, including its impact on wetlands. Please consider the full impact of construction, stormwater runoff, and the secondary impacts of nearby development, and reject the permit for this project that would enable the destruction and degradation of our wetlands and water resources.
