

What incentive do the unvaccinated have if they are told to still mask anyways? They then have NO incentive to vaccinate and thereby defeating your goal.

You say you base your decisions on the science and data, so before you make any decision, do just that.

- The data says that hospitalizations are at a 16 month low (even with lagging numbers)
- The data says deaths are at a 16 month low (even with lagging numbers)
- Cases, may be rising, but in almost all instances symptoms are mild to non-existent
- Vaccination rates are at 70%+
- The data shows masks and lockdowns did nothing to slow the spread in the winter months of 2020.
- Bans and Lockdowns led to a 75% decline in most business revenue
- Bans and Lockdowns led to a 150% increase in suicides in 2020 over 2019
- Bans and Lockdowns led to a 75% increase in business closures in 2020 over 2019
- Bans and Lockdowns lead to sending money to other localities, versus being spent in county.

It is beyond ludicrous to think that we could defeat a new strain with all the measures that did not work the last time. Masks, bans and lockdowns do not work.

No mask and no bans. If you are trying to get more people vaccinated, then requiring masks for those vaccinated is the LAST thing to do. What incentive do the unvaccinated have if they are told to still mask anyways? They then have NO incentive to vaccinate and thereby defeating your goal.

Look at the data and look at the facts. Use your smarts and not your feelings. This variant is not serious and the only way to defeat it is to vaccinate and herd immunity.
