

Dear Council,

I understand no one has a manual for this sort of thing. But to use the same number 50 per 100,000 as both the barometer for lifting the mask mandate and the reinstating it is ridiculous. There needs to be a grey area to see which way the county will go. Pulling the masks off with an avg of 48 cases per 100,000. What did we think was going to happen? The barometer for reimplementatation should be increased to 75 or 100 per 100,000.

This is my proposal on the situation.

Personally, as a gym manager. I find it silly that our patrons needs to wear a mask while working out. But can go to the bar directly next door, sit shoulder to shoulder and watch football for 4 hours at a time without masks on. All because they "are drinking or eating." Yet no restaurant enforces it tightly.

Sincerely,

A patron who cares about safety, but also wants to live their life.
