

Dear County Council Members,

I am writing to encourage you to implement the portion of the budget that decommission is Dickerson incinerator. The data has already been presented, the fact that the incinerator is 30 years old which is expensive to maintain, and recently learning where the ash goes is inexcusable. The pollution that you are generating, at the incinerator, and it's outputs, outweighs any other concern.

While I know the current alternative is the truck it out, I would encourage the county to invest in advanced thermal technologies to lead the way towards the future by investing in our peoples health.

The high taxes of this county deserve better treatment of residence and ours neighbours in other states. It's time to invest in waste disposal for real.

Thank you,

Laurie Snow
