

Q2 2025 DAFIG Report for GenOn Holdings LLC., Westland Ash Storage Site

Westland Ash Landfill (Maryland Ash Management, LLC.)

- Safety concerns for the period – None
- Environmental concerns for the period – Fugitive dust reported by citizen on March 16. We made modifications to where the equipment is fueled inside of the mining area, to limit the movement of equipment on the areas of the ash which have been stabilized with crusting agent. It appears that strong winds from the south on 3/16/25, created a fugitive dust condition, which originated from an area where the excavator operator had tracked his machine across an area which had been crusted, thus breaking the crust on the ash surface. Ash was picked up and became airborne from this area.
- No operational issues during the period
 - o Processed and discharged 1,665,000 gal through the WWTP YTD.
- Ash mining activities.
 - o 62,576 tons of Fly Ash removed in 2025. (Through May 2025).
 - o 983,809 tons of Fly Ash removed since the project started. (Through May 2025).
