

Resolution No.: 20-687
Introduced: November 12, 2024
Adopted: December 10, 2024

**COUNTY COUNCIL
FOR MONTGOMERY COUNTY, MARYLAND**

Lead Sponsor: The Council President at the Request of the County Executive

SUBJECT: Approval of Executive Regulation 13-24: Adoption of the 2021 International Building, Energy Conservation, Mechanical, Fuel-gas, Residential Code, Swimming Pool and Spa Codes, International Green Construction Code, and the 2021 International Existing Building Code

Background

1. The Montgomery County Code, under Chapter 8, Sections 13 and 14, authorizes the County Executive to adopt regulations concerning building codes under Method (2).
2. Maryland's law related to building codes requires each jurisdiction in Maryland to use the same edition of the same building codes that are the International Building Code (IBC), the International Residential Code (IRC), and the International Energy Conservation Code (IECC). The State modified the IBC and the IRC to coincide with other Maryland laws. The International Building Code (IBC), the International Residential Code (IRC), and the International Energy Conservation Code (IECC), with modifications by the State, constitute the Maryland Building Performance Standards.
3. On November 1, 2024, the Council received ER 13-24.
4. The Council reviewed the regulation under Method (2) of County Code Section 2A-16(f). Under Method (2), the Council may approve, disapprove, or extend the time for action within 60 days of receiving the regulation. In the absence of Council action, the regulation is deemed approved as submitted.
5. On December 2, 2024, the Economic Development Committee reviewed Executive Regulation 13-24 and concluded that approval was in order.

Action

The County Council for Montgomery County, Maryland approves the following resolution:

The Council approves Executive Regulation 13-24, Adoption of the 2021 International Building, Energy Conservation, Mechanical, Fuel-gas, Residential Code, Swimming Pool and Spa Codes, International Green Construction Code, and the 2021 International Existing Building Code, effective December 10, 2024.

This is a correct copy of Council action.

COMCOR 08.00.02 Adoption of the 2021 International Building, Energy Conservation, Mechanical, Fuel-Gas, Residential, Swimming Pool and Spa and International Existing Building Codes

08.00.02.01

This regulation is adopted under Sections 8-13, 8-14, and 51-12 of the Montgomery County Code (MCC), 2014, as amended, and applies to the construction, alteration, addition, repair, removal, demolition, use, location, occupancy, and/or maintenance of all buildings, structures, and swimming pools and spas, and their service equipment, within Montgomery County. It supersedes Executive Regulation # 31-19 dated May 20, 2020, Executive Regulation 12-20 dated September 28, 2021, and all previous regulations adopting the International Code Council (ICC) standards. This regulation adopts the 2021 editions of the IBC, the IECC, the IgCC, the IMC, the IFGC, the IRC, the ISPSC, and the IEBC, with amendments necessary to achieve uniformity and consistency with Maryland and Montgomery County laws and ordinances, as well as department/division policies and procedures. Where this regulation differs from Chapter 22 of the Montgomery County Code (Fire Safety Code), it does not preempt or negate any more restrictive provisions of that code.

08.00.02.02

Wherever the ICC Electrical Code is referenced, replace the reference with Chapter 17 of the Montgomery County Code. Wherever Chapter 11 of the International Building Code or the ICC/ANSI A117.1 is referenced, replace the reference with the Maryland Accessibility Code. Wherever the International Fire Code or International Property Maintenance Code is referenced, replace the reference with the Montgomery County Fire Safety Code.

APPLIANCE. A device or apparatus that is manufactured and designed to utilize energy and for which this code provides specific requirements.

COMBUSTION EQUIPMENT. Any equipment or appliance used for space heating, service water heating, cooking, clothes drying, or lighting that uses fuel gas or fuel oil.

CONTINUOUSLY BURNING PILOT LIGHT. A small gas flame used to ignite gas at a larger burner. Once lit, a continuous pilot light remains in operation until manually interrupted.

DEMAND RESPONSIVE CONTROL. An automatic control that can receive and automatically respond to demand response requests from a utility, electrical system operator, or third-party demand response program provider.

EQUIPMENT. Piping, ducts, vents, control devices and other components of systems other than appliances that are permanently installed and integrated to provide control of environmental conditions for buildings. This definition shall also include other systems specifically regulated in this code.

FUEL GAS. A natural gas, manufactured gas, liquified petroleum gas or a mixture of these.

FUEL OIL. Kerosene or any hydrocarbon oil having a flash point not less than 100°F (38°C).

MIXED-FUEL BUILDING. A building that contains combustion equipment or includes piping for combustion equipment.

SOLAR-READY ZONE. A section or sections of the roof or building overhang designated and reserved for the future installation of a solar photovoltaic or solar thermal system.”

Section R401.2.5 Additional energy efficiency.

In Item 1, Add “all-electric” after word “For” and before “buildings”; and

MONTGOMERY COUNTY EXECUTIVE REGULATION

Offices of the County Executive. 101 Monroe Street. Rockville, Maryland 20850

Subject: Adoption of the 2021 IBC, IECC, <u>IgCC</u>, IMC, IFGC, IRC, ISPSC, and IEBC	Number: 13-24
Originating Department: Department of Permitting Services	Effective Date: December 10, 2024

Add Item 2 “For mixed-fuel buildings complying with Section R401.2.1, the building shall be required to install either R408.2.1 or R408.2.5 of the additional efficiency package options, and any two of R408.2.2, R408.2.3, or R408.2.4 of the additional efficiency package options.”

Change Item 2 to 3.

3.1 Replace 2.1 with “All-electric buildings shall have one of the additional efficiency package options in Section R408.2 be installed without including such measures in the proposed design under Section R405”.

3.2 Add “all electric” after the word “the”: “The proposed design of the all-electric buildings under Section R405.2 shall have an annual energy cost that is less than or equal to the 95 percent of the annual energy cost of the standard reference design.”

Add Item 3.3 “Mixed-fuel buildings shall have either R408.2.1 or R408.2.5 of the additional efficiency package options, and any two of R408.2.2, R408.2.3, or R408.2.4 of the additional efficiency package options installed without including such measures in the proposed design under Section R405.”

3.4 The proposed design of the mixed-fuel building under Section R405.2 shall have an annual energy cost that is less than or equal to 85 percent of the annual energy cost of the standard reference design.

Change Item 3 to 4.

Add new Item, “5. For buildings complying with Section R402.1.3.1, the structure shall also comply with the additional energy features in Section R408.3.”

08.00.02.126

Section R401.3 Certificate.

After the first appearance of the word ‘builder’ delete ‘or other approved party’. After the word ‘building’ in the first sentence add “for all New Construct Permits or Add/Alt Permits where conditioned space has been increased”; and

In Item 4, Add “fuel sources,” after word “sizes,” and before “and”; and

Section R402.1.3 R-value alternative.

Add new section: “R402.1.3.1 Maryland Alternative R-value. Assemblies with R-value of insulation materials equal to or greater than that specified in Table R402.1.3.1 shall be an alternative to the U-factor in Table R402.1 when combined with Section R408.3. The provisions of Section R408.2.1 shall be applied to the base model house to establish the reference base design establishing energy efficiency.”; and

Add the following table:

- b. The fenestration U-factor column excludes skylights. The SHGC column applies to all glazed fenestrations. Exception: In Climate Zones 0 through 3, skylights shall be permitted to be excluded from glazed fenestration SHGC requirements provided that the SHGC for such skylights does not exceed 0.30.
- c. "10ci or 13" means R-10 continuous insulation (ci) on the interior or exterior surface of the wall or R-13 cavity insulation on the interior side of the wall. "15ci or 19 or 13 & 5ci" means R-15 continuous insulation (ci) on the interior or exterior surface of the wall; or R-19 cavity insulation on the interior side of the wall; or R-13 cavity insulation on the interior of the wall in addition to R-5 continuous insulation on the interior or exterior surface of the wall.
- d. R-5 insulation shall be provided under the full slab area of a heated slab in addition to the required slab edge insulation R-value for slabs. as indicated in the table. The slab-edge insulation for heated slabs shall not be required to extend below the slab.
- e. There are no SHGC requirements in the Marine Zone.
- f. Basement wall insulation is not required in Warm Humid locations as defined by Figure R301.1 and Table R301.1.
- g. The first value is cavity insulation; the second value is continuous insulation. Therefore, as an example, "13 & 5" means R-13 cavity insulation plus R-5 continuous insulation.
- h. Mass walls shall be in accordance with Section R402.2.5. The second R-value applies where more than half of the insulation is on the interior of the mass wall.
- i. A maximum U-factor of 0.32 shall apply in Climate Zones 3 through 8 to vertical fenestration products installed in buildings located either:
 1. Above 4,000 feet in elevation, or
 2. In windborne debris regions where protection of openings is required by Section R301.2.1.2 of the International Residential Code.

1. a building with a permanently installed on-site renewable energy system;
2. a building with less than 600 square feet (55 m²) of roof area oriented between 110 degrees and 270 degrees of true north; and
3. a building where all areas of the roof that would otherwise meet the requirements for a solar-ready zone are in full or partial shade for more than 70 percent of daylight hours annually.

R404.4.1 Solar-ready zone area. The total area of the solar-ready zone shall not be less than 300 square feet (28 m²) and shall be composed of areas not less than 5.5 feet (1676 mm) in width and not less than 80 square feet (7.4 m²)

Exception: Townhouses three stories or less in height above grade plane and with a total floor area less than or equal to 2,000 square feet (186 m²) per dwelling shall be permitted to have a solar-ready zone area of not less than 150 square feet (14 m²).

R404.4.2 Obstructions. Solar-ready zones shall be free from obstructions, including but not limited to vents, chimneys, and roof-mounted equipment.

R404.4.3 Electrical service reserved space. The main electrical service panel shall have a reserved space to allow installation of a dual pole circuit breaker for the solar electric installation and shall be labeled "For Solar Electric." The reserved space shall be positioned at the opposite (load) end from the input feeder location or main circuit location.

R404.4.4 Electrical interconnection. An electrical junction box shall be installed within 24 inches (610 mm) of the main electrical service panel and shall be connected to a capped roof penetration sleeve or a location in the attic that is within 3 feet (914 mm) of the solar ready zone by:

1. minimum 1-inch continuous conduit; and
2. where the interconnection terminates in the attic, location shall be no less than 12" (35 mm) above ceiling insulation. Both ends of the interconnection shall be labeled "For Future Solar Electric".

Add Section "R404.5 Energy storage infrastructure. An energy storage ready area shall be installed in accordance with the following:

Exception: Where an onsite electrical energy system storage system is installed.

1. Floor area not less than 2 feet (610 mm) in one dimension and 4 feet (1219 mm) in another dimension and located in accordance with Section 110.26 of the NFPA 70.
2. The main electrical service panel shall have a reserved space to allow installation of a two-pole circuit breaker for future electrical energy storage system installation. This space shall be labeled "For Future Electric Storage." The reserved spaces shall be positioned at the end of the panel that is opposite from the panel supply conductor connection.

Add Section "R404.6 Additional electric infrastructure. Combustion equipment shall be installed in accordance with this section.

R404.6.1 Combustion water heating. Water heaters shall be installed in accordance with the following:

1. a minimum 1-inch continuous conduit shall be provided between a junction box located within 3 feet (914 mm) of the equipment and an electrical panel. Both ends of the conduit shall be labeled with the words "For Future Heat Pump Water Heater" and be electrically isolated;
2. a condensate drain that is no more than 2 inches (51 mm) higher than the base of the installed water heater and allows natural draining shall be installed within 3 feet (914 mm) of the water heater;
3. the water heater shall be installed in a space with minimum dimensions of 3 feet (914 mm) by 3 feet (914 mm) by 7 feet (2134 mm) high; and
4. the water heater shall be installed in a space with a minimum volume of 700 cubic feet (20,000 L) or the equivalent of one 16-inch (406 mm) by 24-inch (610 mm)

grill to a heated space and one 8-inch (203 mm) duct of no more than 10 feet (3048 mm) in length for cool exhaust air.

R404.6.2 Combustion space heating. Where a building has combustion equipment for space heating, the building shall be provided with a designated exterior location(s) in accordance with the following:

1. natural drainage for condensate from cooling equipment operation or a condensate drain located within 3 feet (914 mm);
2. heat pump space heating equipment sized in accordance with R403.7; and
3. a minimum 1-inch continuous conduit shall be provided between a junction box located within 3 feet (914 mm) of the equipment and an electrical panel. Both ends of the conduit shall be labeled "For Future Heat Pump Space Heater."

Exception: Where an electrical circuit in compliance with NEC 440.4(B) and NEC 440.35 exists for space cooling equipment.

R404.6.3 Combustion clothes drying. A minimum 1-inch continuous conduit shall be provided between a junction box within 6 feet (1829 mm) of the equipment and an electrical panel and shall be accessible with no obstructions. Both ends of the conduit shall be labeled with the words "For Future Electric Clothes Drying" and be electrically isolated.

R404.6.4 Combustion cooking. Section 301.2. Definitions. Add the following definitions:

Gross Aggregate Area means the sum of the floor areas of all the spaces within the building with no deductions for floor penetrations. *Gross Aggregate Area* is measured from the exterior faces of exterior walls or from the centerline of walls separating buildings. Gross Aggregate Area includes covered walkways, open roofed-over areas, porches and similar spaces, exterior terraces or steps, roof overhangs, parking garages, surface parking, and similar features.

EVSE Installed: Fully Installed EVSE with connector (plug) with a minimum 208/240 volt, 40-amp circuits, including sufficient panel capacity, conduit, and wiring. Dedicated parking spaces shall be identified at original building permit submittal.

Delete EV Ready Space and replace with:

Section 701.3. Mandatory Provisions.

701.3.1. EV Capable/Ready Parking. Construction documents shall indicate the raceway termination point and proposed location of future EV spaces and EVSE. Construction documents shall also provide information on amperage of future EVSE, raceway methods, wiring schematics and electrical load calculations to verify that the electrical panel service capacity and electrical system, including any on-site distribution transformers, meet the requirements of this code. Parking spaces equipped with EVSE shall be identified by signage. A permanent and visible “EV-Capable” or “EV-Ready” label shall be posted in a conspicuous place at the service panel to identify each panel space reserved to support EV-Capable or EV-Ready Spaces, respectively and at the termination point of the raceway or circuit termination point. See Table 701.3.1 for details.

and Space for charging electric vehicles).

- b) Federal requirements (Regulations under Titles II and III of the Americans with Disabilities Act).

701.3.2 Additional electric infrastructure. Buildings that contain combustion equipment and end-uses shall be required to install electric infrastructure in accordance with this section.

701.3.2.1 Combustion space heating. Space heating equipment that uses fossil fuels shall comply with either 701.3.6.2.1.1 or 701.3.6.2.1.2.

701.3.2.1.1 Low-capacity heating. Warm-air furnaces with a capacity less than 225,000 Btu/h and gas- and oil-fired boilers with a capacity less than 400,000 Btu/h shall be provided with a designated exterior location(s) in accordance with the following:

1. Natural drainage for condensate from cooling equipment operation or a condensate drain located within 3 feet (914 mm) of the location of the space heating equipment.
2. A dedicated branch circuit in compliance with NFPA70 Section 424.4 based on heat pump space heating equipment sized in accordance with the requirements of ASHRAE 90.1 Section 6.4.2.1 and terminating within 3 feet (914 mm) of the location of the space heating equipment with no obstructions. Both ends of the branch circuit shall be labeled “For Future Heat Pump Space Heater.”

Exception: Where an electrical circuit in compliance with NFPA70 Sections 440.4(B) and 440.35 exists for space cooling equipment.

701.3.2.1.2 High-capacity heating. All other space heating equipment shall be provided with conduit that is continuous between a junction box located within 3 feet (914 mm) of the equipment and an electrical panel. The junction box, conduit and bus bar in the electrical panel shall be rated and sized to accommodate a branch circuit with sufficient capacity for an equivalent electric equipment with an equivalent equipment capacity. The electrical junction box and electrical panel shall have labels stating, “For Future Electric Space Heating Equipment”.

701.3.2.2 Combustion water heating. Water heating equipment that uses fossil fuels shall comply with either 701.3.6.2.2.1 or 701.3.6.2.2.2.

MONTGOMERY COUNTY EXECUTIVE REGULATION

Originating Department: Department of Permitting Services	Effective Date: December 10, 2024

701.3.2.2.1 Low-capacity water heating. Water heaters with a capacity less than 300,000 Btu/h (88 kW) shall be installed in accordance with the following:

1. A dedicated 208/240-volt branch circuit with a minimum capacity of 30 amps shall terminate within 3 feet (914 mm) from the water heater and be accessible to the water heater with no obstructions. Both ends of the branch circuit shall be labeled with the words “For Future Heat Pump Water Heater” and be electrically isolated.
2. A condensate drain that is no more than 2 inches (51 mm) higher than the base of the installed water heater and allows natural draining without pump assistance shall be installed within 3 feet (914 mm) of the water heater.
3. The water heater shall be installed in a space with minimum dimensions of 3 feet (914 mm) by 3 feet (914 mm) by 7 feet (2134 mm) high.
4. The water heater shall be installed in a space with a minimum volume of 700 cubic feet (20,000 L) or the equivalent of one 16-inch (406 mm) by 24-inch (610 mm) grill to a heated space and one 8-inch (203 mm) duct of no more than 10 feet (3048 mm) in length for cool exhaust air.

701.3.2.2.2 High-capacity water heating. Water heaters with a capacity greater than or equal to 300,000 Btu/h (88 kW) shall be provided with the following:

1. Conduit that is continuous between a junction box located within 3 feet (914 mm) of the equipment and an electrical panel. The junction box, conduit and bus bar in the electrical panel shall be rated and sized to accommodate a branch circuit with sufficient capacity for an equivalent electric equipment with an equivalent equipment capacity. The electrical junction box and electrical panel shall have labels stating, “For Future Electric Water Heating Equipment”.
2. A condensate drain that is no more than 2 inches (51 mm) higher than the base of the installed water heater and allows natural draining without pump assistance shall be installed within 3 feet (914 mm) of the water heater.

701.3.3 Record Documents. Construction documents shall require that within 90 days after the date of system acceptance, record documents shall be provided to the building owner to include: location of additional electric infrastructure for heating and water heating.

701.3.4 Electric infrastructure for energy storage. Each building site shall have space for on-site energy storage not less than 2 feet (610 mm) in one dimension and 4 feet (1219 mm) in another dimension and located in accordance with Section 1206.2.8 of the International Fire Code and Section 110.26 of the NFPA 70.

Exception: Where an onsite electrical energy system storage system is installed.

701.3.4.1 Electrical service reserved space. The main electrical service panel shall have a reserved space to allow installation of a two-pole circuit breaker for future electrical energy storage system installation. This space shall be labeled "For Future Electric Storage." The reserved spaces shall be positioned at the end of the panel that is opposite from the panel supply conductor connection.

Sections R109.1 through R109.1.6. Delete all except R109.1.2, R109.1.5, and R109.1.5.1 and replace with the following: R109.1 Types of inspections. The following inspections must be conducted for all buildings and structures:

1. Sign: The sign must be posted on the property within 3 days after the permit issuance date and must remain posted on the property for 30 days. The sign must be located on the side of the lot/parcel, which provides principal access to the street or right-of-the-way. It must be conspicuously posted not more than 5 feet from the front property line and mounted at least 30 inches, but not more than 60 inches, above the ground. **NO BUILDING INSPECTION WILL BE PERFORMED BEFORE THE APPROVAL OF THIS INSPECTION AND THE DRAINAGE PRECONSTRUCTION, IF APPLICABLE.**
2. Footings: Conducted before concrete placement and after excavations for all footings and thickened slabs are completed; after form work, reinforcing steel, concrete-encased electrode (for new dwellings), and grade stakes are in place; and after sediment control measures are installed according to the approved sediment control plan.
3. Waterproofing/Foundation Drainage: Conducted after the exterior walls have been waterproofed and foundation drainage system has been installed. Insulation, if used, must be in place and protected as required. If interior drain tiles are to be used, weep holes (2 in. minimum diameter, 6 feet on center) must be installed. A second inspection may be required before backfilling the interior drainage system.
4. Concrete slab-on-ground floor: After the installation of the slab base, interior drainage system (if any), vapor retarder, slab edge insulation, and a minimum 3 in. schedule 40 PVC, or equivalent gas tight pipe inserted into a 3 in. tee embedded into the slab base for the venting of RADON GAS and labeled adequately. Where the sump crock is to be used for the venting of RADON GAS, it must be in place at the time of the inspection. For new construction of habitable space exceeding 70 sf, a radon mitigation system is required.
5. Wall check (house location survey): The owner must have a house location survey prepared and certified by a Maryland Registered Land Surveyor and must submit a copy to the building official for approval before erecting the framing. A wall check not identified by a premise address and permit number will not be

accepted. Walls must not be constructed on the foundation without an approved wall check.

6. Masonry fireplace/chimney: Conducted after the fireplace and first flue liner section are completed.

7. Wall Bracing: Conducted before installation of weather-resistive barrier (house wrap).

8. Framing (“close-in”): Conducted after the completion of all framing, air sealing, Weather-Resistive Barrier (Housewrap), rough wiring, fire sprinkler system installation, fire sprinkler system hydro inspection, plumbing, gas and mechanical distribution systems (as required) but before installing exterior finish, insulation and drywall. Roof is to be completed and weatherproof. The exterior finish is NOT to be installed until framing (close-in) has been approved. When plumbing/gas work is part of the construction, a Washington Suburban Sanitary Commission (WSSC) plumbing/gas inspection must be approved before requesting a framing inspection. The building, electrical, and mechanical inspections must be requested at the same time. When floor framing is less than 48in. above the surface below, a framing inspection must be requested before installation of any floor materials.

9. Insulation: Conducted after the FRAMING (close-in) inspection has been approved to verify that the installed insulation complies with the approved plans or specifications for the building.

10. Swimming Pool Bonding: Conducted when the pool has been formed with the rebar installed and bonded before placement of concrete or backfill. During construction pool excavations must be completely enclosed by a 42 in. high safety fence AT ALL TIMES when work is not being performed in the pool. A separate bonding inspection is required under the electrical permit for both the pool shell and the perimeter surfaces.

11. Final: Conducted after the building or structure is completed and ready for occupancy or use. If applicable, final electrical and mechanical inspections must be requested with the final building inspection. A final approval from WSSC must be obtained for all plumbing/gas installations, fire sprinklers, drainage, duct leakage and blower door test certifications before requesting final building

inspections. Where a building is served by an on-site water system or an on-site sewage disposal system, any condition of the permits issued for those systems must be satisfied before the final inspection. If an owner refuses access within a reasonable time after a house is completed, the building official may close the permit file, but this action will not relieve the owner from any obligation to comply with applicable codes. The final inspection must be requested and approved before a building (or portion thereof) is used or occupied.

- 12. Partial Inspection: Conducted upon request. An Inspection fee under the Executive Regulation adopted by the County must be paid when scheduling this inspection.
- 13. Re-inspection: Any of the above inspections disapproved twice for the same violation will be subject to a re-inspection fee under the Executive Regulation adopted by the County. The fee must be paid before any further inspections will be performed at the building site.
