

Welcome to Wheaton Revitalization News!

Wheaton Revitalization News is an email distribution list that will provide frequent updates to the surrounding community on the Wheaton Revitalization project. The purpose of this distribution list is to provide you with project updates and construction activities. For additional information on the Wheaton Revitalization Project please visit <http://www.wheatonproject.com>

Look Ahead - Week of July 2 to July 8

Site activities during the week of July 2 will continue with the wrap-up process of Contractor mobilization. The Contractor will complete set-up of the field offices including temporary power to the offices, construction of decks and steps, move-in, and occupation of the field offices.

The site is being prepared for mobilization of the equipment needed for the Geothermal Drilling scheduled to begin the week of July 10. In preparation for the Geothermal Drilling, site activities over the next week will include continued surface excavation, set-up for deep well drilling, final set-up of the traffic barrier system, traffic and pedestrian signage, fencing, and establishment of the required dewatering equipment.

Ongoing and Planned Activities:

Mobilization

- Contractor and Montgomery County Department of Transportation continue the mobilization process (physically and administratively).

Sediment and Erosion Controls

- Initial establishment of Phase One are in-place.
- Sediment and Erosion Controls will be monitored and maintained on a daily basis.

Traffic Controls

- Traffic controls are essentially in-place with barriers being tightened-up and connected together.
- Traffic Controls will be monitored and maintained on a daily basis.

Pedestrian Controls

- Phase One Pedestrian controls are in-place.

- Pedestrian movement and pedestrian safety will be monitored and maintained on a continuous basis.

Project Signage

- All project related signage will be reviewed and adjusted on a daily basis.

Geothermal Drilling

- The new building will include a Geothermal System. This system extracts energy from the earth for use to heat and cool the new building. The Geothermal system will include 150-individual wells drilled up to 600-feet deep for extracting energy and its transfer.
- The site is being finalized for the drilling operation that is expected to commence the week of July 10.
- Drilling will take place over the next two-months.
