

Montgomery County Climate Action and Resilience Plan (“CARP”) Project Plan

1. Scope of Work

AECOM is providing technical consultant support to Montgomery County for the development of a Climate Action and Resiliency Plan (“CARP”) for the County to meet its GHG reduction goals of 80% (from a 2005 baseline) by 2027 and elimination by 2035. AECOM’s partner, Nspiregreen, will lead analysis and incorporation of racial equity and social justice considerations into prioritization and development of climate mitigation/sequestration and adaptation actions and support with other tasks associated with the CARP. As part of CARP development, AECOM will develop and deliver the following:

- **Priority Action Report** – presenting the top GHG mitigation/sequestration actions and the most impactful adaptation actions from the climate workgroup recommendations to be carried forward for detailed analysis
- **GHG Action Modeling and Implementation Considerations Report** – summarizing the results of modeling GHG reduction impacts of the priority mitigation/sequestration actions and steps necessary to implement each priority action
- **Climate Vulnerability Assessment** – based on the results of down-scaled climate modeling, summarizing the results of the County’s exposure to climate change, characterizing social dimensions with built environment dimensions, and describing economic and financial impacts of climate exposures/vulnerabilities in the County
- **Draft CARP** – to be presented along with high-level fact sheet and presentation through public information and engagement sessions for public input
- **Final CARP**
