

Hepatitis A Heatmap

The color of each cell indicates the normalized concentration of Hepatitis A.

- Gray: Non-detection.
- Orange: Detection; Darker color shows higher concentration.

Y-axis displays different sampling locations

X-axis displays sampling date

Each cell shows the average value of 5 sample locations on that day

This heatmap shows the normalized concentration of hepatitis A (HAV) in wastewater. The gray tiles indicate the location shows negative for HAV. The more red the tile, the higher the normalized concentration of hepatitis A for that location.
