

Did you know?

VINES KILL TREES

Vines strangle branches, killing trees.

Take Action:

**Cut invasive vines climbing trees
on your private property.**

1. Scan your private property for vines on trees.
2. Wear gloves and proper safety gear to cut them down. If the tree is dead, steer clear. It will need to be cut down by a professional.
3. Cut the vine at the base of the tree, and again at shoulder height to prevent it from regenerating. Take caution not to cut the tree bark and NEVER pull on the vine, it will fall off by itself over time.

Scan with your phone's camera and tap the screen.
