

Quality Improvement Office

In response to requests by our EMS Clinicians, the EMIHS section has implemented a streamlined and standardized process for clinicians to request patient follow-up information. Our hope is that being able to provide this information to interested clinicians will enable you to assemble the entire picture of your patient's disease processes.

A request form is posted on the EMIHS Quick Links page. Those who request patient information via this form will receive the information via email from an EMIHS staff member, usually within seven days.

The direct link to the form is:

<https://form.jotform.com/92813882363969>

Patient follow up information is sensitive protected health information. As an EMS Clinician who cared for the patient, you are authorized to obtain it as part of the quality improvement process, but **the handling of the information must be done properly**. To that end, please use this request form as your sole means of obtaining follow up information from this point forward. To be clear, now that this mechanism is in place, the practice of soliciting follow-up information on an informal basis from hospital personnel should be discontinued.

Questions regarding this announcement should be directed to the MCFRS Quality Improvement Officer.
